ATLANTIAN HOMES ROCK CONSTRUCTED

W. H. Hicks, Globe Trotter, Has Yielded to the Charms of Glendale

W. H. Hicks, who is somewhat of a globe trotter and who has within recent years made four trips from ocean to ocean investigating the housing problem, has fallen a victim to the charms of Glendale and its environs and is here seeking a location on which to build for the company he represents about 50 modern, fireproof homes of Atlantian rock construction. This construction, he explains, consists of crushed granite reinforced with creosoted wood and steel and bound together with cement.

In the course of his investigations he has learned that the nation is short approximately five million houses. After having a chance to experience the delights of Southern California and to witness the flow of home-seeking travelers and to realize that "westward the star of empire takes its way," he has decided that Southern California would be an excellent field in which to begin his missionary work of supplying those missing homes. As the fastest growing city in the United States, Glendale has naturally recommended herself to his good judgment, and a visit or two to our city has done the rest. That is the reason for his search for a location here. He and his company are approaching their task from a rather exalted viewpoint, as was disclosed in the course of an interview with Mr. Hicks, who said:

"Our company realizes that in order to build ideal homes and make good citizens out of the coming generation, those homes must represent economy, utility, durability, beauty, education, production and service. By the use of Atlantian rock, machinery, quantity production, and increased value, we get economy.

"Utility is secured by obtaining the finest architects in America to draw plans that will enable us to use every square foot of space in the house. We contend that there are thousands and thousands of acres of the most valuable space on roofs in our cities that are never utilized except for the purpose of protecting the interior from the elements. For that reason we are making roof gardens in every home we build, thus utilizing the entire roof.

"We are getting durability by building fireproof, vermin-proof, moisture-proof homes that will last for many generations with practically no repair.

"We are getting beauty through the proportions of the buildings, the openings, by decorating the exterior with statuary, ornamental vases, vines and flowers and by different colored canopies. We are getting beauty inside by using educational pictures. We have many to select from, including the reproduction in colors of the mural decorations in the congressional library in Washington. These pictures represent different planes of consciousness. These fine lithographs, which measure 20 by 30 inches, will be set into the plaster with a neat frame and be covered with glass. Beauty will also be introduced by the use of printed silk tapestries, woven silk tapestries, and there will be many academic subjects. These will represent the educational side of our enterprise.

"We get production by building these homes on lots large enough to enable the owners to raise garden truck.

"We get service by the use of all these things combined."

Mr. Hicks says they expect to get acreage near Glendale or Burbank where these homes will be built and sold at very reasonable rates on ten-year contracts. He also says they hope to be in a position to begin building operations in the near future.

WILSON-CUNNINGHAM UNITED IN MARRIAGE

A wedding of interest to Glendalians took place at the Presbyterian manse, 120 South Cedar street, Saturday evening at 7 o'clock, when Will H. Cunningham of Glendale and Carrie E. Wilson of Los Angeles were united in marriage by Rev. W. E. Edmonds. The ring ceremony was used and immediately after the ceremony the happy couple departed for San Diego. Mrs. L. A. Mitchell and Mrs. W. E. Edmonds were witnesses.

Mr. Cunningham has been employed by the N & M Grocery, recently leaving there to take up the bakery business in the Fancy Bakery on North Brand. After spending a few days in San Diego, Mr. and Mrs. Cunningham will return to Glendale to reside.

SPRING MEETING OF PRESBYTERY

The regular spring meeting of the Presbytery will open in Los Angeles Tuesday evening at the Second Presbyterian church. Those going over from Glendale are J. E. Colvin, Rev. Wm. H. Hunter, Rev. A. W. McGlothan, Rev. Louis Tinning and Rev. W. E. Edmonds. The meetings of Presbytery will not close until Thursday evening and promise to be of interest and help to the Presbyterian churches of Glendale and Southern California.

ALFRED PRIEST BUSY

One of the houses to be started this week is the residence of A. S. Funk at the corner of Jackson and Lexington streets, for which plans have been prepared by Alfred Priest. It will cost in the neighborhood of $8000 and is a frame structure.

INTERMEDIATES CAPTURE HONORS

Girls of Seventh and Eighth Win Ribbons at Eagle Rock Meet

The gala day field meet at Eagle Rock, Saturday, in which boys and girls of the grammar and intermediate schools of this city participated to some extent, proved most interesting and a big event from the viewpoint of numbers since not less than 200 children took part. Much credit was given Rex Kelley, secretary of the Glendale Y. M. C. A. and E. E. Harwood, principal of the Eagle Rock Grammar school, but a resident of Glendale, for strenuous and efficient service in working out the details of the meet and putting it through in good order.

A big truck took the boys and girls from this city to Eagle Rock and when they returned about 3 p. m., making a tour of the downtown streets waving banners, and shouting yells of victory, Glendale knew that they had given a good account of themselves in the tournament, and returned with honors.

Intermediate sent teams of both boys and girls, but, of course, could compete only in events for seventh and eighth grades and in the unlimited section. As it was deemed unwise to take girls from the lower grades to Eagle Rock, the grammar schools that sent entrants did not have balanced teams to match their Eagle Rock competitors and therefore did not score as they otherwise might have done. Their individual representatives made an excellent showing.

Intermediate teams were decidedly to the fore and won with a score of 52 2-3 points, their nearest competitor, Eagle Rock, scoring but 12 2-3 points. Intermediate girls starred in their division, winning every honor. The boys' teams did well also as the score shows, but they had stiffer competition.

A few boys of Glendale Union high entered as individuals in the high school classes, but no teams were sent from that school. Cerritos, Doran and Colorado schools also entered contestants. Ribbons were given to all first and second winers. Those who took third place received honorable mention but no ribbons.

Glendale successes as recorded by coaches who witnessed the meet, were as follows:

Third and Fourth Grade Classes

Russell Slocum second in 25-yard dash; John May (Broadway), first in high jump, second in broad jump.

Fifth and Sixth Grade Classes

Tom Muff (Doran), second in 5-yard dash. Relay race won by Broadway's team composed of Harry Lieser, Fred Fromm, Frank Wycoff and Frank Johnson.

Seventh and Eighth Grade Classes

Girls' Events—Every point was won. In 60-yard dash Eula Linkogel was first, Margaret Brown, second. Relay race won by team composed of Eula Linkogel, Margaret Brown, Ruth Jones and Charlotte Blakney. Potato race won by Consuelo Mirano with Marcelline Lameroux, second. Basket Ball, first, Dorothy Norwood.

Boys' Events—25-yard dash, Shannon first, Cressey second. Relay race won by team composed of Elmer Muff, Carl Quinn, Arthur Cressey and Lee Shannon. Shot put, Paul Cena first, Robert Boehm second. Pole vault, Lionel Martinez first.

High School Classes

In high school events George Russ of Union high was an outstanding star, being covered with ribbons. He won the blue for first place in broad jump, in high jump and 100-yard dash; was second for 120-yard hurdles; third in shot put.

Earl Boehm won first in pole vault. Schuler was first in shot put.

Honorable Mention

Third place winners among grammar school boys included Frank Wycoff of Broadway, Norval Stanley of Doran, Charlotte Blakney, Carolyn Ayars, Lionel Martinez, Winfield Fearn, all of Intermediate, and Charles Hart of Colorado.

THE PRESS BUSINESS MANAGER MOVES HERE

Mr. Taylor's departure, together with his charming family, from Orange will be keenly felt both in business and social circles and while the host of friends they have made during the several years of continuous residence in this beautiful little city will regret exceedingly to lose them, the good wishes and Godspeed of the entire community go with them to their new home. Mr. Taylor is nothing if not progressive and his able management of the newspapers of this city with which he has been connected has been an important factor in placing Orange well in the fore as one of the best residential cities of Southern California. The Star-Post and the working force of the Star-Post, especially, with whom Mr. Taylor was more closely associated, take this opportunity of expressing their warmest appreciation of the many kindly considerations shown during their association with him, join with the general public of Orange in sincere good wishes for his newly chosen home, Glendale, where he is now engaged in his profession as Business Manager of the Daily Press, and to which place he will shortly take his estimable family.—Orange Daily News.

Mr. and Mrs. J. M. Lovell entertained yesterday at their home at 505 North Maryland avenue Mr. and Mrs. Luron Havens and Miss Alta Lovell of Los Angeles, and Mr. and Mrs. D. C. Lovell and children of 114 West Laurel street.

CASA VERDUGO METHODIST CHURCH CORNERSTONE WAS LAID YESTERDAY

Will Be Used as a House of Worship Until Congregation Increases Sufficiently to Warrant Erection of New Building—Much Work by Volunteers

Simple but impressive was the laying of the cornerstone of the Casa Verdugo Methodist Episcopal church, at Central avenue and Park place, yesterday afternoon at 3 o'clock.

The building is really a Sunday school building and community hall, but is to be used as a house of worship until the congregation increases in numbers sufficient to warrant the building of a larger church edifice.

Dr. W. L. Y. Davis, of Pasadena, district superintendent, was the speaker of the day. Taking for his text: "They shall call his name Immanuel, which, being interpreted, is God with us," Dr. Davis gave a most eloquent address, deducing from Scripture as well as from science that God is with us always and everywhere, but that if we build Him a house, He will come to us with an especial nearness.

He recalled the instinctive feeling of the nearness of God that was felt even by the ancients, who felt His presence in the sea, the mountains and the caves, but who, in their ignorance, imagined that this Presence which they sensed everywhere was many gods—Poseidon, the god of the sea; Zeus, the god of the mountains; Apollo, the god of the caves. Dr. Davis spoke of the church as the house of pardon, for in the new law, "They shall call his name Jesus, for He shall save His people from their sins."

H. J. Olmsted, chairman of the building committee, gave a statement of the financial outlook of the congregation. Money was raised by the sale of the lots and the old church building adjacent to the new one, also by popular subscription. Much of the work on the building was volunteer labor. The total cost is $15,000, of which there is $8000 still to be paid. Mr. Olmsted and his committee expect to clear this indebtedness by next Christmas. The church is a community church, and as such, is adequate in its present shape for several years. Later, a larger church will be built.

An offering was taken by Mr. Drake, treasurer and chairman of the ways and means committee.

Dr. O. O. Thayer, the pastor, spoke of the sacrifices made by the Sunday school teachers in the interests of the children, the aims of the Sunday school, the devoted work of the Ladies' Aid, and the generosity of the volunteer labor. He then read a list of the articles to be placed in the cornerstone. It included a report of the recent conference in Long Beach, Dr. Julius Soper's history of the church, the names of the trustees, former pastors, the name of the bishop, the present pastor, the architect, a copy of the California Christian Advocate, the names of the Sunday school children, copies of the Glendale Press and the News, names of members of the Ladies' Aid, Dr. Cotton's eulogy of the present pastor, Dr. Thayer, and a copy of the Scriptures.

D. Edwin Murphey, the architect, and G. E. Murphey, the builder, placed the cornerstone, while Dr. Davis pronounced the words: "In the name of the Father, and of the Son and of the Holy Ghost, we lay the cornerstone of this church to the honor and service of God, according to the usage of the Methodist Episcopal church."

The marble slab that sealed the cornerstone was the gift of J. E. Phillips. The opening prayer was made by Dr. Julius Soper and following the doxology by the congregation, the benediction was pronounced by Rev. Charles R. Norton, a former pastor of the church.

TRACT MEET FOR GRAMMAR SCHOOLS

Monday and Wednesday of the coming week will be big days in the calendar of grammar school athletes for on those days will be staged on the Intermediate field an inter-school track meet under the direction of the physical training teachers of the schools. It will be a strictly home affair officered by Rex Kelley and N. R. Whytock, assisted by members of the Intermediate track team, and will determine championship honors.

The banner to be given the team scoring the most points has made the tour of the schools and every boy with any kind of a record is determined to win it for his school if any effort on his part will accomplish the feat. Some of the schools that have no great galaxy of stars will strive for the class banners. The ribbons which represent so much of struggle and glory are now being prepared by students in the art department of Intermediate under direction of Miss Chambers, and every school is confident of winning some of them. In the order of honors blue will stand for first, white second, red third and green fourth.

Because of the large number of contestants a good many trial heats will be run on Monday, the finals taking place Wednesday. It is expected that not less than 100 contestants will participate and citizens are requested to look indulgently upon the small boys whom they may observe in partial undress sprinting on the back streets for there will be a lot of frantic practice in running and jumping between now and Wednesday.

MOTORCYCLE AND AUTO COLLIDE

An auto driven by J. H. Philips, 368 North Lexington, collided with a government motorcycle ridden by S. K. Magill, 428 Kenmore avenue, Los Angeles, Sunday, 9:30 a. m., at the crossing of Columbus and Broadway. Both machines were considerably damaged, but no one hurt.

TOM MARTIN FURST, JR.

Tom Furst is about an inch taller, and Mr. and Mrs. F. W. Pigg, his wife's parents, are about equally exalted. Cause? The arrival Saturday, April 9, of Thomas Martin Furst, Jr. He is a lusty fellow who was born at the Clara Barton hospital in Los Angeles. He and his mother are doing well.

BETTER TOMORROW

Owing to lack of space in today's issue, sermons and other church news has been held over until tomorrow's issue of the Daily Press.

AN APOLOGY

The Daily Press apologizes to some of its patrons for having to omit over 100 inches of advertising matter today. The installation of the large press which is expected to arrive this week will enable the Daily Press to meet every demand made upon it.

This issue of the Daily Press consists of 5000 copies.

ELKS DEFEAT THE TOM MIX PLAYERS

The announcement of the ball game between the team of the Glendale Elks' Club and that of the Tom Mix studio, drew a large and enthusiastic crowd to the Elks' ball grounds at the corner of Glendale and Cerritos, Sunday afternoon. When the game ended with a score of 8 to 5 in favor of the Elks, the enthusiasm took audible form that announced victory to all the surrounding community.

A great feature of the event so far as local players were concerned was the hitting of Mark Doll, who quite covered his team with glory. The first part of the game was pitched by Leman Crandall, who succeeded in getting his opponents so mixed they were unable to score. William Bolin took his place in the last four innings and finished the good work started by Crandall.

It was by no means a walk-away for the Elks, however, as Tom Mix demonstrated that he is as thorough a ball player as he is a scenario star, and that he has the ability to hit the ball when it will do the most good to the score of his team.

The Elks' team will continue to make improvements in the field, especially in accommodations for spectators and every Sunday afternoon will stage a first class exhibition game of baseball. Vincent Salmacio is general manager for the team.

OWNERS OF BICYCLES ARE VERY CARELESS

Five bicycles were picked up on the streets by policemen last night and taken to the city hall. If the owners of bikes would use even ordinary care, always locking their wheels when they leave them and never "parking" them in exposed localities, there would be fewer temptations to theft and hence fewer reports of stolen wheels. "An ounce of prevention, etc."

JOLLY DANCE AT DR. YOUNG'S HOME

A very jolly dancing party was held at the home of Dr. and Mrs. T. C. Young on North Jackson street, Saturday. Mrs. H. MacBain and Mrs. G. J. Lyons acting as hostesses for the evening. Present were Dr. and Mrs. T. C. Young, Mr. and Mrs. A. L. Baird, Dr. and Mrs. Staley, Mr. and Mrs. Harry Hall, Mr. and Mrs. Reeves, Mr. and Mrs. W. W. Worley, Mr. and Mrs. Herman Nelson, Mr. and Mrs. Max Green, Mrs. Tupper, Mr. and Mrs. Harry MacBain, Mr. and Mrs. G. J. Lyons, Mr. and Mrs. Blake Franklin, Dr. Emil Tholen, Miss Lucile Tholen, Miss Margaret Cross, Mr. and Mrs. Sinclair, Mr. and Mrs. Berry.

LUMBER DEMAND TWICE AS GREAT

The Bentley-Schoeneman Company reports the lumber demand is nearly twice as great as last year at this time and that as much building is in progress as at any time last year. They have just bought a new 3½-ton truck with which to deliver lumber and better the service of their patrons.

P. E. O. TO ENTERTAIN VISITING DELEGATES

Charming Program Arranged by Mrs. C. M. Turck for Convention Visitors

The P. E. O. convention next week the 13th, 14th and 15th, at Burbank is to be a large affair with many delegates in attendance from all parts of the state. One of the big affairs for their entertainment will be given the evening of the 14th in the grammar school in Burbank. Mrs. C. M. Turck of this city, member of one of the hostess chapter, heads the committee which has had the program for this entertainment in charge and she has secured fine talent. Lilian Burkhardt Goldsmith is to give a reading, there will be musical numbers by Mrs. Jess, Serafin Pla will sing and so will Mrs. Catherine Shank, several numbers will be furnished by Burbank talent, and there will be some charming child entertainers. Cecilia May Fisher of Burbank who already has a considerable reputation will dance, and so will little Margot Buxton, whose wonderful talent is acknowledged by all who have seen her. She will give a gay little clown dance as "The Doll Court Jester," and other numbers. Miss Fisher will impersonate the figure on a decorated vase which escapes from her imprisonment and comes out to dance and then returns to her place on the vase. The wonderful boy dancer, Frederick Ko Vert will also be on the program and give his celebrated peacock and vanity dances. In his costume for the peacock dance are thousands of peacock feathers.

The program has been arranged for the pleasure of the P. E. O. delegates and because of the limited seating capacity of the hall few outsiders can be admitted.

PERSONAL ITEMS

Mr. and Mrs. J. Hartley of Los Angeles were Sunday guests at the A. Weger home, 332 Ethel street.

Mrs. Alice May of Los Angeles was a dinner guest yesterday of Mrs. E. J. Williams of 530 West Oak street.

Mrs. C. C. Cooper of 502 North Central avenue had as her guest over Sunday Mrs. W. R. Young of Long Beach.

Mr. Keeley expects to get into the home which is being built for him by Contractor Caldwell at 517 East Lomita avenue.

Mr. and Mrs. C. F. Parker of 221 North Central avenue were dinner guests yesterday of Mr. and Mrs. Roy Knox of Los Angeles.

Misses Margaret Pardon, Nellie Warner, Fred Hoffman and Sabin Buck, were dinner guests yesterday at the F. A. Buck home at 112 South Jackson.

Mrs. F. H. Mellus of 355 West Lexington drive, accompanied by a party of friends from Los Angeles, were guests aboard the U. S. S. New York.

Mr. and Mrs. D. E. Fuller of Hermosa Beach were the guests for a few days last week of their daughter, Mrs. Walter Cheever, 1301 Kenneth road.

Mr. and Mrs. F. A. Marek of 212 North Verdugo road have as their guest Mrs. Bessie Klimcke of San Francisco, who contemplates locating in Glendale.

John A. Porter, retired banker at Montrose, who has been ill for the past eight months, is not so well and his friends are quite concerned about his condition.

Mr. and Mrs. Frank Alberts and daughter, Gertrude, of North Glendale, left yesterday morning for a week's motor trip to San Diego and the Imperial valley.

Mrs. C. R. Moore has returned to Glendale after a several months' visit in Chicago. She is at present making her home with her uncle, Dr. Guernsey, 314 North Belmont.

Mrs. C. F. Parker, 221 North Central avenue, had as her guests on Friday, Mrs. Kittie Swain and daughter, Miss Kathleen. Messrs. Swain and Parker were friends in Covina.

W. F. Schubert of Catalina Island was in Glendale the latter part of last week to attend to some business matters. Rumor has it that he intends to return in the fall and erect a residence here.

Mrs. Lillian Loomis who was recently widowed in Arizona, and who is a niece of Mrs. Frank Vesper of East Lomita avenue, has been her guest the past week. She is leaving Thursday for the home of her parents in New York.

Two houses, one on the front and one on the rear of the lot at 301 Harvard, are approaching completion. They are owned by K. Okayama. O. L. Munday's, at 830 Colorado, is also nearly ready for occupancy, also G. T. Ainsworth's at 827 North Pacific.

Mr. and Mrs. John Dunn of 446 West Colorado street and Stanley Frentz, Mrs. Dunn's father, motored to Bakersfield yesterday to visit Mr. Dunn's sister, Mrs. May McClure. Mrs. Dunn and her father expect to go on to San Francisco where they will visit Mrs. William Crawford, sister of Mrs. Dunn.

Mr. and Mrs. C. L. Peckham entertained at dinner Sunday, their guest list including Dr. Emil Tholen, his mother, Mrs. Tholen, who is here from Wisconsin, his sister, Miss Lucile Tholen, his little son Bobbis, Dr. Morse and Mrs. Charles Barker. A pink color scheme was carried out in floral decorations and table appointments.

ACTOR COLONY TO LOSE THE FISHERS

Have Sold Home Here and Plan to Rejoin Relatives in England

Unless the disturbances in England growing out of the great coal strike upset their plans and make Mr. and Mrs. Alfred Fisher of this city decide to postpone their return to England, they will leave this city for New York city. From that port they planned to sail about the 20th on the Olympic for Eastbourne, a beautiful watering place in the southeast corner of England where they have relatives with whom they hope to spend the remainder of their lives. They were guests at a farewell dinner in their honor given Sunday night by Mr. and Mrs. James Neill in their home on West Lomita avenue, where so many celebrities of the theatrical profession have been familiar guests. The Fishers are old friends of the Neills and their going will sever another link between the present and that fondly remembered past in which the "legitimate" stage was the interpreter and exponent of dramatic art, and when the actor, brought into close human touch with his audience, received the applause that rewarded a worthy performance. It meant more than money for actors, like all artists, have never measured success in dollars and cents. The curtain calls, the bravos and pelting with flowers were a precious compensation for which there is no substitute. Moviedom has put between them and their public an impenetrable curtain.

Mr. Fisher has been an actor for 56 years and his wife for half a century. She is known to the profession as Maggie Holloway Fisher and for 30 years played with the Charles Frohman and Liebler companies in association with the brightest stars in the theatrical firmament. Mr. Fisher, a man of versatile talents, has been with Klaw & Erlanger in some of their most brilliant productions. He has been a stage director as well as an actor and is familiar with every department of the business, even to the musical end, for he used to sing and is an old time pantomimist.

In company with Mr. and Mrs. Fisher, the Neills will also entertain William H. Crane and his wife, who are Hollywood residents. Mr. Crane is now 76 years old and except for an occasional appearance at some special performance, has retired from the stage, which he honored for 60 years. Old timers recall the joy they experienced in the Robson-Crane comedies which toured the United States from coast to coast, always commanding capacity houses. For clean, wholesome, spontaneous fun, Mr. Crane's performances have never been surpassed.

Since they came to Glendale two years ago, the Fishers, like Mr. Neill, have been employed in motion picture work. Mr. Neill was for several years with the Famous Players-Lasky company at Hollywood, but is now with the Goldwyn studios in Culver City.

Mr. Crane occasionally accepts an assignment in a moving picture but only occasionally, as he feels he has earned the right to retire and stay retired. Walter Williams, a retired business man from Chicago who is a great friend of the Cranes, will also be a guest at the dinner.

PHILLIPS FAMILY TO GO EAST BY AUTO

Mr. and Mrs. A. H. Phillips have sold their home at 112 West Elk street to Mrs. Bryant of Los Angeles who expects to take possession soon and occupy it as a home. The Phillips and their son are leaving next Saturday for a transcontinental auto trip to Chicago via the Grand canyon. Mr. Phillips' father lives at Cape Girardeau, Mo., and they will probably spend a considerable portion of the summer with him and other relatives and friends, not getting back to Glendale until September. Their return will be by way of the Yellowstone and the Columbia river country and they expect to cover not less than 10,000 miles before they again see the Jewel city. It is 29 years since Mr. Phillips last saw Chicago.

HOUSE JUDICIARY COMMITTEE IS DRY

(By International News Service)

WASHINGTON, April 11.—Desire of city members for liberalization of the prohibition laws has caused a grand rush by them for assignment to the house judiciary committee. Although eight new members were added to this committee it remains dry by a comfortable majority. No promise is held out by its chairman, Andrew J. Volstead of Minnesota, for any relaxation of the dry laws. Instead, there is a strong movement among the dry leaders for a tightening up of the present law, especially with the use of beers for medicinal purposes.

P. E. O. TICKETS

Members of Chapter A. H. of the P. E. O., who desire to attend the special entertainment for delegates to the P. E. O. convention to be given in Burbank, Thursday evening, are requested to call upon Mrs. Charles Turck at her home, 1013 South Glendale avenue to secure their tickets.

AUSTRIA RESENTS MAGYAR CLAIMS

Commenting on a statement by the new Magyar Foreign Minister, Dr. Gratz, to the fact that the Austrian constitution guarantees a plebiscite to the population of Western Hungary, ceded to Austria in the Treaty of Trianon, a semi-official declaration published in the Vienna press says that such interpretation of the Austrian constitution is wholly erroneous. All Austrian parties agree that the question of Western Hungary is finally settled, and that no plebiscite is necessary or even permissible. According to the second clause of the constitution—containing the only reference to the district—the territory in question becomes one of the Austrian Federal States, under its ancient German name of Burgenland.

Vienna papers publish a price list on rifles, machine guns, cannon and ammunition, the document having been found on the person of an arrested Hungarian agent engaged in smuggling arms. The list contains, among other items, 162 field guns, quoted at 50,000 kronen each; 100 howitzers, at 120,000 kronen each, and three of the famous 30½-centimeter mortars, at 460,000 kronen each. It is reported that another large scale expedition for the smuggling of arms and ammunition has been organized by the Hungarian government, and six officers of the Magyar army have arrived in Vienna to negotiate and execute the matter. Vienna papers greet with satisfaction the demand of the entente to deliver war material under the peace treaty, as such material merely serves as a temptation to the Horthy government and usually finds its way across the Magyar border. The danger to Austria is obvius.

The meeting of the Austrian Anti-Semitic association at Vienna on March 14 was followed by anti-Semitic demonstrations, which were subdued by the police without bloodshed; the demonstrators charged that the Jews were guilty of profiteering.

NEW EIGHT-ROOM HOUSE

Mrs. Anna Gould, who recently sold her home on North Jackson street, will begin very soon the building of a high-class, eight-room residence on an acre on Winchester which she has purchased from E. H. Learned of 1400 Sixth street.

INFORMATION ABOUT BABY CHICKS AND HENS

Buttermilk as a food.

The following article, which is contributed by the Poultrymen's Cooperative Milling association of Los Angeles, is from no less an authority than Michael K. Boyer, who has long been recognized as one of the leading authorities on poultry culture in this country. Mr. Boyer writes from actual experience, having large and successful poultry yards which have been in operation as an experimental plant on his poultry farm for more than 2. years.

"Buttermilk, either natural or condensed, can almost be classed as a perfect substitute for meat in the poultry ration, provided the fowls and baby chicks would be able to consume a sufficient quantity to obtain the required amount of protein.

"Beef scraps, fish meal or other forms of meat carrying protein being more concentrated, are more available in furnishing quick protein to the fowl or animal than buttermilk, but where the buttermilk is fed the meat ingredient may be reduced to a large degree. In many cases as much as one-half can be eliminated and yet with the hen or chick having the same percentage, although there are many poultrymen who prefer giving the regular amount of meat which is contained in the chick mashes or the egg mashes in addition to the buttermilk so fed. I have tried this plan for more than two years now, and with most excellent results, from my chicks, growing stock, and layers. A strong protein diet is pretty sure to mean a strong fertility in the eggs."

Here in Southern California we find the best results are obtained by the intermittent feeding of the lactein or semi-solid buttermilk, either alternating every day or by feeding three days and then skipping three days.

He.—I had a realistic dream last night.

She.—Indeed! What was it?

"Oh, I dreamed I proposed to you and you turned me over to your father."

"Yes, yes; and what did father say?"

"Oh, I don't know. I only know I woke up and found myself on the floor."

When putting away men's or boys' clothing for the winter or summer, be sure and look through the pockets for matches that may have been left in the clothes.

YAP IS GROWING IN IMPORTANCE

Yap is only a little island in the Pacific, about 79 square miles in extent and with a population of 8000, but it has assumed a position of importance altogether out of proportion to its size, because of the mandate over it given to Japan. This was in accordance with a treaty made between England and Japan before the United States entered the war, which treaty this country has never recognized. The importance of Yap arises from the fact that it is the landing place of three cables formerly owned by the Germans. The three cables are the only means of communication with the Orient in certain circumstances. If Japan were in complete control of the cables she could at any time cut off the United States from the benefit of their use. Strong protests against the mandate have been made by the American government.

BRIDGES ARE BUILT, AS WELL AS HOUSES

When we talk of Glendale's wonderful building record we talk in terms of houses only, forgetting that some very handsome bridges have been constructed during the past year. Two of these, of reinforced concrete and neither containing even a splinter of wood span the Wash and carry the two roadways of Brand boulevard over this dry bed, which can become a raging torrent after continuous heavy rains. Between these two classic structures are the concrete piers and abutments for the Pacific Electric bridge. The heavy steel beams that are to carry the roadway are unaccountably delayed, hence the incomplete state of the bridge. Foreman John F. Quinn of 432 Arden did some fine work in the construction of the piers and abutments and not once during the two months required for the work was it interrupted by flood waters, as not the thinnest stream of water was seen meandering down the dry channel, even after the storm of over three inches of rainfall. In addition to this, work on Brand boulevard, the wood bridge over the Wash at Central avenue was almost entirely reconstructed and raised considerably higher than the old level.

HOUSEHOLD HINTS

Beads may be strung on a violin string.

Blankets should be darned, not patched.

Pannel chicken is delicious served with currant jelly sauce.

Linseed oil will quickly soften putty that has hardened.

The best kind of bed for the baby is a plain brass or white enameled one.

Minced boiled ham may be moistened with meat jelly, chilled and coated with mustard.

A filling for brown bread sandwiches is a layer of cream cheese and one of prepared mustard.

Bottles can be deoderized with powdered black mustard seed and water.

Place tinfoil under flower vase doilies. It will save the most highly polished table of dampness.

To make cherry cocktail, use red or white cherries, stone, drain and sprinkle with shredded coacoanut.

The tops of high winter shoes should be carefully folded down in order to allow all air possible into the interior.

For scrubbing floors cold water is preferable to hot; it does not soak into the wood so readily and consequently dries sooner.

The scrubbing brush should always be moved up and down the boards according to the grain of the wood, and not across it.

In making buttermilk or sour milk doughnuts, the grain will be much finer if the soda is mixed with the flour instead of with the buttermilk.

Kerosene or gasoline should be applied to the machine at intervals. This cuts the hardened oil that may have accumulated.

Make baking powder biscuits in the usual way, then when ready to roll out mix with a cup of clean dry currants or chopped raisins.

In making pies that are juicy brush over the bottom c rust with the unbeaten white of an egg—it will prevent the crust absorbing the juice.

Cupboard doors and drawers which stick may be induced to open and close easily by rubbing soap or soap powders on the surfaces that come in contact. Soap will also silence squeaking hinges.

Never use a new iron pot without first rubbing it with unsalted fat and heating it in the oven following the light greasing. This will insure the pot against cracking.

WHITE FROST

THE REFRIGERATOR THAT SELLS ITSELF

You Would Never Think That a Refrigerator Could Be So Convenient

WHITE FROST Refrigerators have patented revolving shelves that makes it easy to get at just the dish that you want.

The White Frost Refrigerator saves floor space and its move easy castors makes it easy to move from place to place when you want to clean up the floors.

Another great convenience is the Crystal Glass Water Cooler. It enables you to have cold refreshing water at all times.

Come to our store and see the White Frost Refrigerator for yourself.

THE STATESMAN

The statesman throws his shoulders back and straightens out his tie,
And says, "My friends, unless it rains the weather will be dry."
And when this thought into our brains has percolated through,
We common people nod our heads and loudly cry, "How true!"

The statesman blows his massive nose and clears his august throat
And says, "The ship will never sink so long as it's afloat."
Whereat we roll our solemn eyes, applaud with main and might,
And slap each other on the back, the while we say, "He's right!"

The statesman waxes stern and warm, his drone becomes a roar,
He yells, "I say to you, my friends, that two and two make four!"
And thereupon our doubts dissolve, our fears are put to rout,
And we agree that here's a man who knows what he's about.

NOT POPULAR IN THE SOUTH

The Norfolk Virginian-Pilot recently denounced the Ku Klux Klan in an editorial which a group of like-minded Southern whites have given Southwide publicity. The papers of Knoxville are emphatic in opposing an attempt to organize the Klan there, the Sentinel stating that "we have no place or demand for such an organization in the South," and that "the secret method is not the American way of handling our problems;" while the Journal and Tribune declares that prosperity of the Klan "would amount to a confession that we are as people incapable of self-government." The Chattanooga Times spoke to the same effect some time ago; and Florida has editors of like mind. The Orlando Sentinel notes approvingly the "flaying" of the Klan by the Jacksonville Times-Union, quoting its opinion that "nothing worse was ever done for the South than re-establishing this order without the existence of any conditions to justify it." The North Carolina papers applaud Gov. Morrison's attack on the Klan, which he proposes to run out of the state, as Gov. Bickett did a kindred organization before him. The Raleigh News and Observer, in a vigorous editorial, says there is plenty of room in the open for those who want more thorough-going law-enforcement, * * * and no regalia is necessary. "Why wear a mask and work in the night-time to do a worthy thing?" The Asheville Citizen advises the Klan that "there is no place for secret societies that would compel obedience to law by secret influence." The Greensboro News, in commending the Governor's wrath, declares that he would be negligent of his oath of office if he tolerated any "extra-legal organization to interfere with the execution of law."

FREEDOM OF THE AIR

From time immemorial the freedom of the sea has been a question with the nations and it has been the cause of war and has kept a war cloud in the sky most of the time. With the growth of the ariplane the freedom of the air has become a point of consideration. At a recent international convention it was decided that air pilots should be barred from flight over countries other than their own until they receive a license from their government, showing that they are capable and trustworthy. The United States has no bureau at present that can grant such a license. It will, however, likely be established so that our birdmen may fly wherever they are directed. Every year the tasks of government become greater. The most sensational devlopments of the future are likely to be in the air in connection with wireless messages and the air ships.

RICH—BUT NOT IDLE

Europe may be expected to gasp at that speech of John D. Rockefeller, Jr., about having missed his father's opportunity to make his own way. Europe's leisurely class, what remains of it, cannot understand the American glorification of work. Perhaps no European quite realizes that over here voluntary idleness is almost disreputable. Rupert Brooke may have had an inkling of it when he sensed New York skyscrapers as "built to satisfy some faith, for more than immediate ends; only, the faith was unfamiliar. Here was a poet's confession of Europe's blindness to the western spirit.

A hen does not quit scratching because the worms are scarce and a good man does not stop advertising because business is poor. To this we add Amen.

You can now hear your pastor preach on the telephone—and this doesn't refer to the times when central gives him the wrong number.

There are two kinds of married men: Those who lie to their wives, and those who are not afraid of their wives.

A man never gets so low down that his neighbors won't sign a paper endorsing him for something or other.

There is always a way out of a difficulty. If you don't like the income tax, you can stop making the income.

MICKIE SAYS:

WHEN EV'RY DAWGONE THING 'ROUND THIS HERE OFFIS GOES BLOOEY 'N TH' PAPER IS LATE 'N EVRYBODY IS ALL OUT OF HUMOR, IT ALLUS CHEERS US UP TO HAVE SOME LIL' RAY O' SUNSHINE WHO DONT DO NUTHING BUT EAT 'N SLEEP, COME IN AN' START KIDDIN' US ABOUT BEING SLOW

CHARLES SUTHROE

LITTLE BENNY'S NOTEBOOK

Me and Pud Simkins and Sid Hunt was up in my settin room Sunday aftirnoon and we started to tawk about wat a meen soak Lew Davis was for not reporting for spring baseball practise jest becaws he wasent elected captin of the Invisibles, Pud saying I tell you wat lets do, lets send him an insulting letter.

Like fun, we mite all be arrested for corrupting the mail, sed Sid Hunt.

G. I never thawt of that, sed Pud, and I sed, I tell you wat, Ill get the dictioneery and we'll take a lot of long werds out of it and make a letter and it will sound insulting without enybudy being auxially able to prove it.

Wich we started to do, taking us about an hour to write it and this being it:

Barometer bodkin:

We take this Byzantine opportoonity to tell you we think you are a Carpathian cassowary and a dithyrambic duplication, and not only that but you are a big electro-chemical embassy of a expostulation and a fibrous flocculated finnikin of the worst fossilogy. If you dont beleeve that, you can gavot to gazeteer, you dried up globular gyroscope of a habituated heterodox. You Jurassic jurisdiction, now you know wat we think of you, you marsupial megatherium.

Respectfily, Benny Potts, Pud Simpkins and Sid Hunt.

Being pretty insulting looking for a letter, and jest wen we was going to take it out and male it we found out we dident have eny stamp.

I tell you lets wat, lets stick it under his door, I sed.

Wich we went out to do, and on the way who did we meet but Lew Davis himself eating candy out of a bag, and we stopped a wile to give him a chanct a give us some, and he gave us each 2 hunks and we tore up the letter out of grattitude.

AFTER THREE YEARS

At eve I walked along the well known ways
Of deserted camp. There a brief time ago,
We marched and drilled throughout the crowded days,
Making our bodies fit to match a deadly foe,

The barracks stood, as then, in endless row on row;
Gray husks from which the merry life had fled—
Only no tents rose brown against the horizon's glow,
No whistling details passed with cadence tread.

I missed the comrades who now carry on
Back in the market place, the farm, the mine,
And those across there in the dim Argonne
Who've pitched eternal camp on conquered line.

But as the dusk crept down the neighboring hills
A sense of other loss came with the dew,
For gone from me were the old time leaping thrills
Of Great Adventure—the High Heart that I knew!

—R. D. L. in Detroit News.

HIS UNQUESTIONING FAITH

Professor Alfred Noyes, the English poet, it is known, likes very much to read his works aloud to his friends, and at Princeton, with so many young men under him, he is usually able to gratify this liking to the full. The other day Professor Noyes said to a Junior who had called about an examination: "Wait a minute. Don't go yet. I want to show you the proofs of my new book of poems."

But the Junior made for the door frantically. "No, no," he said, "I don't need proofs. Your word is enough for me, professor."—Argonaut.

"Here's an article on the household page headed: 'Homespun yarn.' What is homespun yarn?"

"It's the story you tell your wife when you get home at 3 a. m."

KINDS OF PINS THE LADIES USE

Judging by the stupendous number of pins and hairpins manufactured in this country every year, the task of the fair sex in keeping up their "crowning glory," and keeping their clothes together must be something terrific.

Also, according to the number of needles manufactured each year, the American sewing must be some job, too.

Fourteen billion toilet pins are produced by American factories annually. American mothers find it necessary to purchase 720,000,000 safety pins every year in order to keep the blessed little kiddies properly harnessed.

The yearly crop of metal hairpins is a billion and a quarter.

Needles of all kinds aggregate 235,000,000 every twelve months.

The value of this pin and needle crop is $13,000,000 at the factories.

There are 45 factories engaged in the making of these articles, the total capitalization being $9,424,000.

Back in 1850 there were only four pin factories in the United States. They had a combined capital of $164,000, and a combined annual product of 297,550 pins. It will thus be seen that the growth of this industry has been something tremendous.

Before Era of Pins

Thorns and fish bones were used as a means of fastening clothing long before the discovery of pins and needles and thread. Among the remains of the lake dwellers of Central Europe have been found a great number of pins—some of bone, others of bronze. Some of them are quite fancy, having ornamental heads, while others are very crude. Some have double stems, and a few have been found that were made exactly like the safety pin of today. Among Egyptian and Greek ruins have been found many specimens of artistically made pins. Ancient Roman bronze pins and bone hairpins, with fancy heads, have been found at Pompeii.

Pins for the use of the toilet were first made in England during the fifteenth century. They were made of iron wire. Brass wire pins were introduced from France in 1540 by Catharine Howard, Queen of Henry VIII. The foundation for the manufacture of the present-day pin commenced with the invention of the process of drawing wire. For many years all pin manufacturing was confined to France and Germany, where this process was invented. Brass wire pins were first made in England in 1826.

In the early days of pinmaking it was a tedious process. They were made by filing a proper length of wire to a point and then twisting a fine piece of wire to the other end, thus forming a head. This required many workmen, all of which was done by hand, as machinery had not been invented.

First Pin With a Head

In 1775 the American Congress, realizing the absolute necessity for pins in the development of the civilization of the country, offered a bonus of 50 pounds for the first 25 dozen domestic pins equal to those imported from England.

In 1797 Timothy Harris of England devised the first solid-headed pin.

American inventive genius, as usual, continued on the job until the best idea was hit upon. Lemuel Wellman Wright of this country invented a machine in 1824 which gave the industry much headway. His machine made solid heads on the pins by a process similar to the making of nails, by driving a portion of the pin itself into a countersunk hole. This was done automatically.

Seven years later, in 1831, John Ireland Howe, a doctor in Bellevue hospital, New York, invented a machine for making solid-headed pins. A company was organized and a factory was started at Derby, Conn.

The modern automatic pin machine completes the pin in all details except the coloring and polishing.

Slocum's Invention

Samuel Slocum of Connecticut invented the first pin sticking machine. Dr. Howe utilized it in his factory in 1841. This machine is almost human in its workings. One workman feeds it with pins and another feeds it with papers. The packages come out at the other end of the machine exactly as the ladies buy them at the dry goods stores.

The Chinese were the first people in the world to use steel needles. The Chinese needles slowly made their way westward until they were brought into Europe by the Moors.

The earliest needles known to history did not have eyes, but were like awls, and were used for making holes in the skins, through which long roots of plants, or leather thongs, were passed and then tied. Later a hole was bored through one end of the stone or bronze needle, through which the root or leather was passed, and thus dragged through the hides as punched. Such needles are found in the remains of the stone age. Bone needles with eyes are found in the reindeer caves of France and the lake dwellers of Central Europe.

It was not until after 1885 that needles were entirely made and finished by machinery.

NOW

Its today that I am livin',
Not a month ago,
Havin', losin', takin', givin',
As time wills it so.
Yesterday a cloud of sorrow
Fell across the way,
It may rain again tomorrow,
It may rain, but say,
Ain't it fine today?

—Selected.

READY TO JOIN

Minister.—Would you care to join us in the new missionary movement?

Miss Ala Mode.—I'm crazy to try it. Is it anything like the fox-trot?—Chaparral.

Dinner plates should always be sent to the table warm enough not to cool the food served on them.

OF INTEREST TO HOUSEWIVES

SOME USES FOR LEMONS

For breaking up a cold there is nothing better than hot lemonade taken upon retiring. This is made by putting the juice of two lemons in a pint of hot water and boiling two or three minutes. Sweeten to taste and drink as hot as possible.

One of the best remedies for a cough, both for children and grown people, is made with the juice of three large lemons, same quantity of boiling water, sugar enough to make a thick syrup and alum the size of a bean, pulverized. Mix well, let boil up once and take off to cool. Dose, one teaspoon every hour. In case of a sudden hoarseness lemon juice and sugar will often give speedy relief, and for obstinate hoarseness or when croup is feared, lemon juice and honey is an almost certain cure.

Two or three slices of lemon in a cup of hot tea will often ward off a headache.

ALMOND SPONGE CAKE

Blanch and pound in a mortar one ounce of sweet and one ounce of bitter almonds. Pound them two at a time, adding a few drops of water or white of egg to prevent the nuts from boiling. When a smooth paste, add the yolks of five eggs alternately with one cupful of powdered sugar. Then add one cupful of flour, sifted with two teaspoonfuls of baking powder. Lastly, fold in the stiffly beaten whites and bake as for angel food.

RAISIN PIE

One and a half cups seeded raisins 1½ cups boiling water, grated rind and juice of half a lemon, 1 tablespoon flour, ½ cup sugar, ½ cup finely chopped walnuts. Cook raisins in boiling water until tender, mix flour and sugar and add to raisins, stirring until thick. Beat the eggs, add lemon and combine mixtures. Let cool slightly and bake between two crusts.

PASTRY SHELLS

Bake pastry in or on the outside of muffin pans and fill these shells with jam, preserves or well-sweetened stewed fruit. With or without the addition of whipped cream these form a delicious dessert. These shells may be filled with creamed chicken, creamed peas, or other creamed vegetables, adding an attractive dish for another meal.

BANANA PIE

Take one cupful of sifted banana pulp, one-half cupful of sugar, one cracker, powdered fine, one-half cupful of milk, grated rind and juice of half a lemon, one-half teaspoonful of salt, one-third teaspoonful of cinnamon, one egg and one-third of a cupful of cream. Mix all together and bake in a pastry-lined pie plate.

YOUR FACE IS AN OPEN DOOR

A most interesting and absorbing series of public lectures on "How to Read People on Sight," will be given next week in Glendale at the Glendale Commercial School by Homer M. Baker, a noted vocational expert and character-analyst.

This useful science is based on the study of the shape of the human body, the head, the face, color and the hands. Man is a product of inheritance, and his traits of character and tendencies to act are transmitted to him inseparably with the bodily characteristics of those of his ancestors after whom he happens to take.

When you understand the body, face and head forms of a person you at once know his inborn tendencies, can tell what he likes or dislikes, for what he has aptitude, how he is likely to behave under given conditions and with whom he can harmonize.

All leaders of men, people who employ others, or are dependent on others for their good will in business, pleasure or happiness are using this new science to greatest advantage.

It has given them an insight into human nature hitherto believed impossible, and among its students there has been fostered a good will toward their neighbors that makes for the finest efficiency in leading helpful, happy lives.

"I had an attack of heart trouble last night."

"Is that so?"

"Yes. I held four hearts and drew for a flush and missed."

The nose is red, a violent hue, from lapping up the mountain dew.

"Straight Ahead" is also a good slogan for Glendale.

AN UNDERWORLD MOVIE

"How sweetly the goldfish are singing today,"
Said Irma Malonel Vangilder;
Then through seven reels "Gat" McCann led the cops
Who sought to find out why he killed her.

The picture was labeled "The Thinking Machine,"
Notorious Players, Producers,
Whose specialty seemed to be yeggmen and thugs,
White slavers, dope hounds and seducers.

The author was Willard Delancy Swideux,
Whose right name was William Skinner;
Guynn Maartyn, director; photographers, Ed
Van Dusen and Percival Bynner.

Crime One was committed on Riverside Drive
Where Irma, vampirish though meaty,
Had lived in a flat with a poodle and wealth
Put up by her millionaire sweety

There entered McCann, of the underworld set,
Dolled up with a stick and Tuxedo,
A leer in his eye and a sneer on his face
As the said, "Kid, I'm back from Toledo."

"I see," said the woman, who once was his girl,
"But why the swell scenery, dearie?"
"I'd hate to be seen as my natural self,"
He said; "of the cops I feel leery."

"Besides," he declared, with a grimace of hate
Beclouding his front elevation
"You're going with me from this elegant dump,
"With little or no hesitation."

He patted the gat which she knew he had hid
Beneath the dress coat he was wearing,
While she, with a smile meant to register scorn,
Maintained a composure most daring.

"You fathom the tenor of my terse remarks?"
He asked as she gazed in the water.
"How sweetly the goldfish are singing, she chirped,
And, smarting with anger, he shot her.

"Great heavens!" she cried, as her head struck the floor,
"I'd never have thought that you'd do it."
"Remember the oath I took five years ago?"
"Yes, Gat, but how could you hold to it?"

To which he replied not a word, as he sneered
With hatred while Irma was dying,
And men in the house were lor lynching the thug
While women spectators were crying.

The mystery back of McCann's callous deed
Seemed hopeless of any solution,
Until at the end of the seventh wild reel,
With the date fixed for Gat's execution.

The Tainking Machine was the cause of it all—
A sinister yogi from Burma
Who, during a seance, slipped Gat the info
That someone had stolen his Irma

It took seven reels of most lurid detail,
With many a fight and a quarrel,
To prove that unfaithfulness, even by crooks,
Is thought to be highly immoral.

JUD TUNKINS

Jud Tunkins says he can't understand why some people think it's any kind of a comfort to explain to a man that his troubles are his own fault.

The air pressure at 6000 feet is 80 per cent of what it is at sea level, that is, from 11 to 12 pounds per square inch.

As a means of inquiry the ouija board has at least the advantage of eliminating a large amount of irrelevant conversation.

DAMAGED

UNCLE SAM'S NEWEST POSSESSION; HOW THE UNITED STATES ACQUIRED IT

By H. O. BISHOP

It is only once in a while that one meets an American who realizes that the famous Virgin Islands are now as much a part of the United States as Alaska or Indiana.

It is more than likely that within a few years these islands will be developed into a great winter resort. Uncle Sam commenced dickering for the purchase of these picturesque islands more than 50 years ago. The dickering started in 1865 during the administration of President Lincoln. Secretary Seward became especially anxious to secure them. The fact that during the war between the states St. Thomas was a refuge for Southern privateers and blockade runners impressed him with their strategic value. In 1866 he visited the islands and soon thereafter made Denmark an offer of $5,000,000 for the group. Denmark offered to sell them for $15,000,000 or to sell St. Thomas and St. John for $10,000,000. Secretary Seward agreed to split the difference, offering $7,500,000 for the two. Denmark was game and accepted the offer and signed the treaty but the United States senate failed to ratify.

The proposition was again considered during the Harrison and Cleveland administrations, but nothing definite was done.

The Danes Decline

In 1898 the senate committee on foreign relations authorized the president to purchase the islands for use as a naval and coaling station. Secretary of State Hay arranged a treaty for the acquirement of the islands for $5,000,000 which the senate promptly ratified, but this time the Danish Rigsdag declined to ratify.

In 1917 Secretary of State Lansing tried his hand at it. He successfully closed the deal for the sum of $25,000,000.

It is, of course, generally understood that the United States did not purchase the islands as an investment. They were purchased primarily for strategic purposes. St. Thomas and its harbor is the strongest and most easily fortified spot in the West Indies. It can easily be made an impregnable fortress and a valuable commercial shipping station.

The Virgin Islands are a part of the great archipelago between North and South America known as the West Indies. The West Indies consists of three principal groups: The Bahamas, lying east of Florida; the Greater Antilles, consisting of Cuba, Haiti, Porto Rico and Jamaica, and the Lesser Antilles, a numerous line of smaller islands extending in a curve east of Porto Rico and southward to South America. The most northern and eastern group of the Lesser Antilles is known as the Virgin Islands, and are divided into three groups. The islands of Culebra, Vieques, and adjacent smaller islands, belonging to Spain, and came into the possession of the United States when Porto Rico was ceded. These islands lie between Porto Rico and St. Thomas. The eastern group is a British possession and comprises the islands of Tortola, Anegada, Virgin Gorda and adjacent smaller islands. The group known as the Danish West Indies comprises the islands of St. Thomas, St. John and St. Croix and adjacent smaller islands. The total area of the three groups is less than 300 square miles. Besides the principal islands named there are about 50 smaller islands belonging to the Danish group, most of them unnamed and uninhabited. The total area of the group is less than 150 square miles. St. Croix, the largest of the islands, has an approximate area of 85 square miles, St. Thomas 30, and St. John 20.

About St. Thomas

St. Thomas is 40 miles east of Porto Rico, its port is 1400 miles southeast of New York. It is 1000 miles east of Key West, Florida; 1000 miles from the Panama Canal, and 480 miles from La Guaria, the chief port of Venezuela, South America. The harbor of St. Thomas is recognized as the safest and best in the West Indies. Situated on the Virgin Passage, and commanding strategically the entrance to the Carribean sea, it practically dominates the northern coast of South America, the entrance to the Panama Canal and the entire eastern coast of Central America. Ships of all nations have visited this harbor from the time of the discovery of the islands by Columbus in 1493 right down to the present time.

St Thomas is 14 miles long and 3 miles wide. The entire surface is broken, rising to a ridge along its entire length, in some places 1500 feet high. Its coast line is indented, making a succession of bays and capes, very picturesque and beautiful.

St. John is similar in configuration and has a fine harbor, Coral Bay, which engineers say could be developed at small expense to rival the famous harbor of St. Thomas.

St. Croix is 40 miles south and is quite different in physical aspect from St. Thomas and St. John. There are some mountains, but most of the island consists of fertile plains, with a rich and easily cultivated soil.

The climate of all the islands is exceptionally fine. The maximum temperature is 91 degrees, the minimum 68 degrees, with an average of 79 degrees. The ever-present northeast trade winds temper the heat, thus keeping the climate most delightful throughout the year.

St. Croix has a population of 15,000; St. Thomas 10,000 and St. John 1000 —a total of 26,000. Of this population only 2000 are white; 20,000 are very black and 4000 are half and half.

Laxity of Marriage

About 15 per cent of the people are legally married. The others live together by mutual consent.

Under Danish rule the Moravian church was established as church of the islands. There are, however, many adherents of the Episcopalian, Catholic and Lutheran faiths.

The morals of the island are at a rather low ebb. More than 60 per cent of the children are illegitimate. This goes back to the old days of slavery when men and women were regarded as chattels and they were expected to breed as many children as possible in order to secure laborers in the fields. American influence, however, is rapidly changing these old customs.

The natives have permitted farming and stock raising to dwindle to a great extent. There are good opportunities along these lines for enterprising Americans.

When the archipelago now known as the Virgin Islands was discovered by Columbus, there were so many little islands all around him that he saw it would be impossible to think up names for all of them, and therefore called them the "Virgins," suggested by St. Ursula and her 11,000 virgins.

When Columbus made his debut upon the islands they were inhabited by the Caribs, a ferocious tribe of Indians. The Carribean sea got its name from these Indians. Figures and inscriptions on rocks on the island of St. John said to have been the work of Caribs are still in excellent state of preservation.

The first attempt at an European settlement on the Virgin Islands was made by Erik Smidt, a Dane, who landed on St. Thomas in 1666, taking possession in the name of Denmark. A small colony was started, but on account of hardships was soon abandoned. In 1672 the Danish West India company sent Jorgen Iverson with 100 colonists to the island. This was the real beginning of permanent occupancy and settlement. In 1674 slaves were brought from Africa and by 1680 more than 50 estates were established. They were engaged principally in the cultivation of tobacco.

Twice Held by Britain

For 254 years the Virgin Islands remained in the possession of Denmark. There were two short periods when they were held by Great Britain, once from April, 1801, to February, 1802, and again in 1807, when they were seized during the Napoleonic wars. They were turned back to Denmark again in 1815.

This brief history of the Virgin Islands would be incomplete without reference to the buccaneering years when the islands were the rendezvous and their indented bays and harbors the safe retreat and hiding places of the privateers and pirates who for so many years "roved the Spanish Main." The complete history of those years will, for obvious reasons, never be written. But the archives of the principal European nations engaged in maritime enterprise and American colonization, if searched, would throw light on an era which for romance and adventure has no parallel in the history of the world.

Early in the sixteenth century French corsairs, Dutch sea rovers and English smugglers, slavers and privateers, began to appear in the West Indies. In the seventeenth century these nations found it both necessary and profitable to wage a general warfare against Spain, who was trying to keep them all out of their American possessions. This loose league or association became known as the buccaneers, who for many years preyed on Spanish commerce and attacked the Spanish settlements both on the islands and mainland of North and South America. The buccaneers were for the most part a lot of dare-devils, reckless and usually lawless, but when serious work was undertaken they became well regulated and orderly. If a French fleet came over to attack a Spanish settlement they attached themselves to the French and acted under their orders. If an English or Dutch fleet came for the same purpose a like course was followed. When any of these drove out a Spanish settlement and planted a colony of their own in its place, it naturally became a haven of refuge for the buccaneers.

In some places the buccaneer boys took exclusive possession. Here they gathered supplies, planned raids, divided their spoils, gambled away to each other their "pieces of eight," and deeply imbibed such beverages as are forbidden American citizens since the advent of the eighteenth amendment. They collected tribute from pretty much all the world, and during periods of relaxation from deeds of daring and devilry, they went the full limit with such diversions as were afforded by music, dancing, song and the fair sex. When this became monotonous they hoisted sails and set out for a little exciting pirating or shot up some unsuspecting Spanish village. Such depredations were not only countenanced but encouraged by the European nations desirous of breaking the power of Spain and seeking to supplant her colonies with their own. It was by their help that the Spaniards were driven from island after island of the West Indies.

The Virgin Islands, although claimed by Spain, never actually came into her possession, and hence escaped being fought for and successfully lost and won. But through all the years when warfare was carried on, the Virgin Islands were a favorite resort and place of refuge for the buccaneers. It is certain that they were not always unwelcome, for Denmark had no love for Spain, and the lavish expenditures of the freebooters went to the enrichment of the Danish merchants.

Alexander Hamilton, one of America's most noted men, was born on the island of Nevis, an English possession. When five years old he was taken to the island of St. Croix where he remained until he reached the age of 15, when he was sent to this country to be educated. He remained here until his death in 1804.

CHICKEN FILLETS WITH ALMOND

Sprinkle two chicken fillets with salt, a little pepper and a few grains of cayenne. Dip in olive oil and cook in a hot frying pan until delicately brown. Add to the pan one cupful of equal parts of white sauce and cream. When hot thicken further with two tablespoonfuls of flour rubbed to a paste with an equal quantity of olive oil or cream. Stir until the sauce boils, then add one-half cupful of thinly sliced almonds.

Will Rogers and his supporting cast are in Arizona shooting scenes for "Doubling in Romeo."

RECIPE FOR MAKING OWN YEAST CAKES

Cook two ounces (or about two handfuls) best hops one-half hour in nine pints of water and run the liquid through a colander while hot. Add two ounces (about one-half teacup) fine table salt and one-half pound sugar to this. Let the liquid cool to about blood warmth (98 degrees) then sift one pound warmed flour into a crock, make a depression in the flour, pour the lukewarm liquid slowly into this, stirring it steadily until all is thoroughly mixed. Let this mixture stand for two days in a warm place. During this time thoroughly stir daily three or four times with a spoon. On the third day cook three pounds potatoes, mash and press through a colander and mix in with the first mixture. After the whole has stood one day in a warm place there should develop upon it a thick, dark froth. Thoroughly stir all together, pass it through a sieve or cloth and put into a stone jug, cork well and tie cork on securely with a cord. The yeast must be kept in a cool place. It will keep for months. Every time some is to be used the jug must be well shaken to mix contents. The quantity to be used is about the same as of other yeasts. —A. H. E. S., Santa Barbara.

CLOSEUPS

Charles Ray's next picture will be called "The Barnstormer." Charlotte Pierce will play opposite.

Ford Sterling and his wife, Teddy Sampson, have become reconciled and are in Europe on a pleasant jaunt.

Wanda Hawley, Realart star, has completed "A Kiss in Time," temporarily entitled "It Can Be Done."

Edith Roberts' forthcoming picture, "My Lady of the Island," will contain many Catalina island scenes.

Richard Dix has been chosen for the leading male role in "The Glorious Fool," Mary Roberts Rinehart's first original screen story.

Gouverneur Morris' story, tentatively known as "The Hangman," will be sent to the screen by Goldwyn as "Who Shall Judge?"

Maxwell Karger, Metro director of specials, has returned to Los Angeles from New York and is engaged in the filming of "The Man Who."

Sidney D'Albrook, character comedian, will play the comedy heavy in Vitagraph's "The Son of Wallingford."

Thomas Jefferson will have the role of "Rip Van Winkle" in the screen version of the play that bestowed fame upon his father, Joe Jefferson.

Elinor Glyn appears as an extra in her own screen story, "The Great Moment," now being filmed at the Lasky studio in Hollywood.

Irene Rich's new publicity man now states that she lived for years in Idaho and that her father was the owner of a mine there.

Peter B. Kyne, California novelist, has been signed by Universal to write a series of stories for the use of Harry Carey.

Fred LeRoy Granville's story, "Pacific Storms," has been purchased as a starring vehicle for Frank Mayo.

Polly Moran, former Mack Sennett comedienne, is said to have a hilarity-making role in Bebe Daniels' current picture, "The March Hare."

John Harron, brother of the late Robert Harron, is a member of the Goldwyn cast producing Rita Wieman's original story, "The Grim Comedian."

Jean Calhoun, Jacqueline Logan, Ruth Ashby and Gertrude Olmsted supply most of the pulchritude in "Three in a Thousand," Frank Mayo's current starring picture.

Eileen Sedgwick's forthcoming Universal serial, "The Terror Trail," does not lack thrills. A mine shaft scene supplies several for one episode and ten lions appear in another.

Lewis S. Stone will head an all-star cast that will produce "The Rosary" for Selig-Rork productions. Other five-reel productions will follow "The Rosary."

Roscoe Arbuckle and his company producing "Gasoline Gus" for Paramount, are working at present in an especially built village on the Lasky ranch, near Los Angeles.

Eileen Sedgwick, Universal star is in a Los Angeles hospital recovering from an operation for appendicitis. Her tonsils are also being removed.

Iva Forrester is playing opposite Art Acord in "The White Horseman" serial. A stretch of desert is the locale for several important scenes.

Monte Blue, Willard Louis and William Boyd have strong roles in Mary Miles Minter's current Realart picture, "Moonlight and Honeysuckle."

Norma Talmadge and Wallace Reid were the winners in a recent popularity contest conducted by the Moving Picture World. The contest was national in its scope.

Al Christie's second six-reel comedy "See My Lawyer," has just been released by Robertson-Cole. T. Roy Barnes is the star and Grace Darmond plays opposite.

Charles Meredith, who appeared in Ethel Clayton's picture, "The Ladder of Lies," will again supoprt that star in her current picture, "The Lifted Veil," an adaptation of Henry Arthur Jones' play of the same title.

CHRISTIAN SCIENCE LECTURE BY JOHN W. DOORLY, C. S. B.

Member of the Board of Lecturship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass.

Entitled "Christian Science, The Science of the Christ which includes all True Science, Theology and Medicine."

The lecturer was introduced by Mr. Dale G. Vaughan, first reader, First Church of Christ, Scientist, Glendale.

The lecturer said:

POPULAR VIEWS OF SCIENCE, THEOLOGY AND MEDICINE.

Should humanity pause in its headlong course of materialism long enough to consider, calmly and dispassionately, where this course is leading it to, it would certainly be astounded and perhaps horrified to find how great a part material theories play in human calculations and conditions, and how small a recognition or acceptance is given to spiritual facts. Our world of today accepts as science that which deals wholly with material things, and whatever thought enters into its so-called scientific calculations, is always mortal or material. This world likewise accepts a theology which is supposed to be quite apart from science, and indeed until recently it was considered little less than blasphemous to couple theology and science. It may well be asked: If science is not akin to Christianity or Christliness is it of any value to humanity and indeed is it not anti-Christian unless based on spiritual facts? Also if theology is not related to science can it possibly be true, for to be true it must be scientific, since the word science means only exact knowledge? These material views of science and theology have naturally evolved a healing system which is based wholly on material theories and which its own advocates would hardly claim to be an exact science. Indeed many of its most ardent adherents have themselves frequently denied that the material drugging system is in any way an exact science.

The conscientious mortal then must face the fact that he is today basing his existence, his salvation and his happiness on three things; first on a science which only pertains to material conditions and never to spiritual facts, second on a theology which does not claim to be scientific or exact, and third on a healing system which is neither spiritual nor truly scientific. What a picture of materialism this is for humanity to face after thousands of years of human effort! It is true that many of the thinking people of today are deeply troubled at the evidence that theology, or our systems of salvation, seems to save from so little, and that the material healing systems have to stand helplessly by whilst men and women are devastated by epidemics and by a host of so-called incurable diseases. Also that the efforts of material science have in many cases been utilized not for the benefit of men, but for the destruction of men through the most horrible methods of warfare. Is humanity never to stop and consider these indisputable facts seriously? Shall men forever persist in their course of materialism, remaining content to believe that these things must be so and that there is no permanent and fundamental remedy for human woes?

SCIENCE, THEOLOGY AND MEDICINE AS UNDERSTOOD IN CHRISTIAN SCIENCE.

Christian Science, on the other hand, teaches that there is an exact Science which is true to Christ and Christianity, that there is a theology which is wholly scientific or true, and that there is a divine healing method which is both Christlike and scientific. These three, this Science, this theology and this healing method, Christian Science declares to be eternal, ever-present, demonstrable facts of being, for they are the Science of Life, the theology of Spirit, and the healing method of Truth. Christian Science teaches that these are the divine systems which Jesus lived and labored to reveal to mankind. In fact these are the systems which all reformers have perceived dimly and have labored to reveal to men. Christian Science utterly refutes the suggestion that reformers such as Abraham or Moses, Luther or Wesley were striving to bring to humanity some indefinite and impracticable idealism. It declares without hesitation that they perceived and understood to some extent the only real Science, the absolute Science of spiritual being, which explains God's true nature and the relationship of true being to God, the only true theology, the exact, scientific, saving and redeeming effect of Truth upon human thought, and the only true healing method, the infinite ability of spiritual understanding or of spiritual thinking to deliver from the diseases of mortal thought and experience. Christian Science teaches that these are also the divine systems which are revealed and outlined throughout the Scriptures, and that the Bible is no fairy story, but is, when its teachings are properly understood, the book of absolute Science, of pure theology and of scientific healing. Christ Jesus the Saviour of men foresaw and foretold that these three systems revealing the eternal facts of being should some day appear to humanity in all their certainty and science. This appearing he foretold as the coming of "the Spirit of truth," (John 16, 13) and Christian Scientists know that today there has been revealed to humanity that for which men have prayed and suffered, that for which they have lived and died and for which they have been willing to sacrifice all. This blessed thing is the absolute Truth, about God and about existence, which expresses itself through divine Science, and which Mary Baker Eddy has discovered in this age and founded.

Truly has Whittier written:—

"Oh, sometimes gleams upon our sight,
Thro' present wrong th' eternal Right;
And step by step, since time began,
We see the steady gain of man.

"That all of good the past hath had
Remains to make our own time glad.
Our common, daily life divine,
And ev'ry land a Palestine.

"Thro' the harsh noises of our day,
A low sweet prelude finds its way;
Thro' clouds of doubt, and creeds of fear,
A light is breaking calm and clear.

"Henceforth my heart shall sigh no more
For olden time and holier shore:
God's love and blessing, then and there,
Are now and here and ev'rywhere."

(Christian Science Hymnal, p. 18.)

THE CHRISTIAN SCIENTISTS' OBLIGATION TO PREACH CHRIST.

Christian Scientists recognize that they are only beginners in the understanding of the Science of Christianity and they do not claim to be absolute and complete demonstrators of this Science. In fact they freely admit that there has only been one perfect demonstrator of Christian Science and that is Jesus the Christ. They do know, however, that God has revealed to the world through Mary Baker Eddy, this divine Science, the Science of the Christ, which includes in itself all true Science, theology and medicine.. They also know that as their fellow men and women understand and accept this Science that its accomplishments in the way of healing and saving will be even greater than they are at present, and will indeed be so overwhelmingly conclusive that no man will be able to doubt the origin of this Science as being divine. It cannot be too frequently affirmed that Christitan Scientists have no quarrel with their fellow religionists, with their friends who believe that science is wholly material or with their medical friends. Indeed Christian Scientists desire to have the greatest love and respect for every one of their fellow men, no matter what their religious, scientific or medical opinions. Let the critic of Christian Science who thinks that Christian Scientists are attacking his particular system, because they are declaring the Science of Christ, remember that there are on earth today some millions of people who at one time believed that Christian Science was trying to take something essential from them through its teachings, but who now gladly acknowledge that they also have found in Christian Science more than they ever hoped for in the way of holiness, happiness and health.

GOD AND HIS CREATION AS UNDERSTOOD IN CHRISTIAN SCIENCE.

Let me then invite you to consider this Science of the Christ which embodies, and is based wholly on the idealism of Christ Jesus. As Christian Science pertains wholly to God and to His creation or to true being, it is of course necessary for us to consider what God is before we can proceed.

Popular theology has regarded God as a distant being to be sought, in times of need, through prayer. These prayers, in a few instances, seemed to be answered but in the majority of cases they remain unanswered. Material science has, with its material theories, removed God even farther from the ken of mortals, and material healing systems have educated thought to consider God as a being who works through material processes. Christian Science takes exactly the opposite view. Christian Science declares that God is an ever-present divine reality, who is ever available to His own creation and is infinitely knowable. His presence and power, Christian Science teaches, are essential to every right activity and consequently to all health, holiness or happiness, and to all true existence. God, Christian Science also teaches, has nothing in common with materiality, but He and His creation exist independent of suppositional matter and its so-called laws. In fact Christian Science teaches that God is the source and cause of all that is true and, therefore, of true existence.

The Scriptures use several terms for God which all Christians have accepted but which few Christians have understood practically and intelligently. Mrs. Eddy has applied these same terms to God, but she has logically accepted the conclusions about God which these terms indicate. For instance, the Scriptures teach that God is Love, but they also teach that God is Spirit, consequently Mrs. Eddy has concluded that Love is Spirit and therefore that Love is not to be found in material conditions. Also the Scriptures declare that Spirit or God is infinite and Christian Science likewise logically concludes that matter, or material existence, is not the truth of being. In the same way the Scriptures teach that God is the only cause and creator and Christian Science therefore accepts the fact that the only real or true existence there is or can be, must be the emanation or expression of this one and only cause, God. As God is immutable and is without shadow of turning, His creation must be an emanation or expression of immutable Spirit and must consequently be wholly spiritual.

GOD AS DIVINE MIND, AND CREATION, SPIRITUAL OR MENTAL.

It is evident to anyone who has studied the Scriptures closely that when Jesus declared God to be Spirit he was not declaring God to be some indefinite abstraction, but he was revealing and describing the most certain, the most available and the most stable entity that could possibly be imagined,—Mrs. Eddy has once and for all taken this word Spirit out of the realm of mysticism and superstition and placed it in the realm of reason and science by explaining that Spirit is really divine Mind, or is the infinite Intelligence which knows, and knows divinely or truly. It is certain that when Jesus used the term Spirit he meant divine Mind, for on one occasion he explained quite naturally to his listeners "the words that I speak unto you, they are spirit, . . ." (John 6, 63). In fact infinite Truth, which includes all divine mentality, is Spirit. Christian Science, therefore, teaches that God is divine Mind or Spirit and that divine Mind is Love. As God is everpresent and omnipotent, the divine Mind which is Love must therefore be the only Mind. Also divine Mind and its right mental activity must be omnipotent and irresistible. Even if one did not believe in the Scriptures and he reasoned logically he would naturally arrive at these same conclusions. Material existence shows that evil is destructive and that material conditions pass away. Therefore being, to be eternal, must be spiritual and wholly good. Jesus in his teachings frequently tried to show men that Spirit could not produce matter, and he was simply explaining the great metaphysical and scientific fact that God is the only cause and that existence must be exactly like that cause and so wholly spiritual, and not what the human senses declared it to be when he uttered such a statement as "That which is born of the flesh is flesh: and that which is born of the Spirit is spirit." (John 3, 6.)

Mrs. Eddy has summed up the essence of her teachings in a short statement which she calls the "scientific statement of being.". This statement is given on page 468 of her text book, "Science and Health with Key to the Scriptures," and is as follows:—"There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal: matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual." As time goes on it will be found that in this statement lies the crux of all true Science, theology and medicine.

THE CONCLUSIONS OF HUMAN SYSTEMS AND OF CHRISTIAN SCIENCE.

Here then we have the following conclusions:—

(1) The physical scientist believes that existence is finite and material and his thinking relates wholly to so-called material substances and their actions. The Christian Scientist declares that true existence is absolutely spiritual or divinely mental, is wholly in and of God, or Spirit, and his thinking relates to divine facts.

(2) The theologian of today offers an indefinite concept of God as a distant, indescribable Being, whose power and presence are sometimes manifested in extraordinary or miraculous ways to deliver men from evil or to plague them with evil, and who manifests Himself through material conditions. Christian Science, on the other hand, teaches that God is divine Mind and that this Mind is Love. Also that this one Mind which is Love is most truly understandable and is ever available to men through right mental activity or spiritual thinking. Christian Science further teaches that this one infinite Mind, God, forever operates through spiritual thinking to deliver men from all that is unlike Himself. In fact Christian Science teaches that the divine Mind, God, operates not through material conditions, but to deliver from material conditions.

(3) The material healing systems of today rely on non-intelligent material drugs for health, which drugs express the contrary of the nature of God, or Spirit, and the effects of which are highly uncertain. These healing systems also teach that God or Spirit works through material means. Christian Science, on the other hand, teaches that disease is an effect of mortal thought and of false medical laws and opinions, and that acquaintance with God, the one and only Mind, brings into operation the true healing law, the law of God, or of divine Mind which frees from the mortal mind and its diseased beliefs. In fact, the three material systems deal with both matter and Spirit as realities, co-operating and coalescing. Christian Science, however, declares there is but one reality, namely Spirit, God, divine Mind, and its expression; also that material existence is but a temporal falsity which only seems real to the mortal or carnal thought. Christian Science further declares that an understanding of God and of spiritual being will deliver from mortal thought or from the carnal mind and from its dream, mortality. This absolute, invariable understanding or spiritual thinking is what the Scriptures describe as the Mind of Christ, or the Mind which was in Jesus Christ.

THE THINKING OF A CHRISTIAN SCIENTIST ESSENTIALLY INTELLIGENT.

I would ask you to consider seriously whether the Christian Scientist is less intelligent, less scientific, less cultured, or less Christian because he devotes his time and energies wholly to the effort of attaining the Mind of Christ and to understanding the divine Mind, God, and His spiritual creation, rather than to the study of fleeting material conditions which have no true science, no stability, no actual law and no divine reality? It must be admitted that it is the lack of this very spiritual thinking which has caused mankind to wander so far from the understanding of divine law and divine realities, and to wallow in the mire of material intellectualism in which there is and can be no real Science, no divine theology, and no true healing. It must also be admitted that it is through this constant study of spiritual facts, or through divine communion, that mankind will be led out of the by-ways of materialism and will be awakened to the great spiritual and scientific fact of one infinite, ever-present God, divine Mind, and one infinite, indestructible creation, absolute spiritual being, never beginning, never ending, but perfect and eternal as the Father Himself. It is also in this study that the truly wise man will find his solace and comfort, that the truly intellectual man will find his joy, and that the true reformer will discover man's infinite ability to help and to heal his fellow-men.

THE PRAYER OF CHRISTIAN SCIENCE.

How, then, is the Science of Christ, or Christian Science, which includes in itself all true Science, theology, and medicine, going to reveal to men the truth of being which Science should reveal, the saving and redeeming theology which alone can deliver humanity from sin, and the healing grace which alone heals. One of the greatest aids to the understanding and demonstration of this Science of being, is prayer. What a wealth of deep and consecrated thought that word prayer stirs in us all. As long as the word prayer exists, human hope can never be entirely lost. Then is the Christian Scientist who depends so largely on prayer, not in accord with humanity's purest and highest desires? It is true that prayer has been so misunderstood and misused that much of its effulgence and true meaning has been lost, but even yet no word means more to poor sick and suffering humanity than does this word prayer. What then is the prayer of a Christian Scientist? It is not a spasmodic attempt to perform the impossible, that is to change or to influence the immutable, divine Mind, God, who is always Love. It is not an attempt to obtain from Deity something that we do not deserve in order that we may continue on our material course. Neither is it an attempt to deliver ourselves from sickness, from poverty, from worry, nor from any vicissitude of human experience simply in order that we may be free from pain and trouble.

The prayer of a Christian Scientist is his constant, conscious, unremitting mental desire to live above the mortal and in accord with the divine. It is his unceasing attempt to commune with the divine Mind, God, and so to utilize the true Science which reveals true existence, the true theology which inevitably delivers from sin, and the true healing power which always heals disease. The Christian Scientist's prayer is his persistent daily and hourly affirmation of divine Mind's infinite presence and power, and of evil's nothingness. It is his increasing knowledge of God and of absolute spiritual being, and before this the so-called carnal mind and its falsities of sense, material existence, sin, disease, and death grow fainter and finally disappear. This is the prayer of which Paul speaks as praying without ceasing. True prayer is one of the tenderest, most certain, most scientific and most intelligent things on earth or in heaven. The Christian Scientist's prayer is, in fact, his spiritual thinking and living, or his right mental activity. When a man thinks rightly he is expressing his true being as the likeness of God, divine Mind. Spiritual thinking is, therefore, really Immanuel, or God with us. Just as soon as a man recognizes that his constant right thinking and right living, or his right mental activity, that is his true consciousness, is indeed Immanuel, or divine Mind, God, with us, he at that moment begins to understand why true prayer is infallible and is infinite in its ability to reveal divine facts which save and heal. Thinking divinely, or having the Mind of Christ, is attaining somewhat to man in God's image, the true and only man, the man God made, the man who is forever an expression or emanation of God, to whom belongs dominion over all material things.

Prayer is as infallible, as certain, as definite and as irresistible as God Himself, for it is God, divine Mind, with us, expressing Himself through the Mind of Christ, or through spiritual thinking. Such prayer knows no failure and no fear. It honors God in a way that a poor attempt to change or influence God can never do. Prayer recognizes and abides by God's allness and evil's nothingness. This is the prayer Jesus described when he stated, in accord with all true Science, all true theology, and all true medicine, "ye shall know the truth and the truth shall make you free." (John viii., 32). Prayer demands absolute life-long consecration of thought, desire, activity, intellect and purpose to spiritual law and divine facts. It teaches us to acknowledge God in all our ways, and to recognize no other source or cause. Prayer demonstrated is heaven here and now and within us, for it includes in itself all health, all holiness, happiness, peace and assurance. Such prayer is God's law to every condition, for it is the very presence and power of divine Mind, God.

THE PURPOSE OF TRUE PRAYER.

It might be well to explain that Christian Scientists make much of the healing of disease for the same reason that Jesus did, and that is because the healing of disease through spiritual means is accepted as a clear and indisputable proof of Immanuel, or God with us. As a matter of fact, Christian Science teaches that what humanity really needs to be healed of primarily, is its faith in things material, or of its material thinking. Every sin, every disease, every sorrow, every material condition, every catastrophe, every phase of fleeting mortality, Christian Science declares to be but an effect of material thinking, or of the carnal mind, and Christian Science therefore proposes to heal the individual and the world of these things by first correcting their material thinking, or their false material theories, with the Mind of Christ, or with spiritual thinking. The real mission of Christian Science, therefore, is to destroy men's false faith in things material by demonstrating beyond a doubt the allness and supremacy of Spirit or of the divine Mind, which is God.

Let me remind you that the Christian Scientist's prayer does not succeed because of a merely intellectual attempt to know the Truth at the moment of prayer, but it succeeds because of his life-long struggle to understand God and spiritual being, and to utilize divine Science in every event of life. Even the casual thinker will see that there is no connection between such prayer which understands and demonstrates the infinite presence and power of the Mind which is God and the pitiful attempts of mesmerism, or of hypnotism, to heal men. Christian Science healing dispels the mortal or mistaken sick or sinning sense which claims to bind man, and proves the divine fact that God, divine Mind, is the only Mind, and that this Mind alone governs and controls man.

CHRISTLIKENESS, AS DEMONSTRATED IN THE PRAYER OF A CHRISTIAN SCIENTIST.

Christ Jesus, the master Metaphysician, when he made the statement, "Greater love hath no man than this, that a man lay down his life for his friends" (John xv., 13), gave an exact rule by which men could prove their Christlikeness, or their willingness and ability to demonstrate divine law. Christian Science, therefore, teaches that in proportion as a man understands the allness and the infinite reality of Spirit, God, divine Mind, and the temporal nature of material existence, in proportion as he strives to lay down his false sense of life as material and finite, and to attain his true life as God's expression, wholly spiritual or divinely mental, in that proportion is he truly adhering to Christ Jesus' teaching. In fact, as a man banishes from his thinking the qualities of the carnal mind such as idolatry, hatred, wrath, and many other phases of the carnal mind, all of which Paul describes as "the works of the flesh" (Gal. v.), and as he attains in his daily life those qualities of thought which Paul describes as "the fruit of the Spirit" (Gal. v.), then he is truly laying down the false sense of life. This process of spiritual thinking and living demonstrates the infinite presence and power of the divine Mind, God, before which the so-called carnal mind, with its false mental conditions and its materiality, gives place. Paul further says, "the fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance:" (Gal. v.), and he adds, "against such there is no law." (Gal. v.). A Christian Scientist, therefore, finds that as he strives to let his thinking and his life express these divine qualities, or as he strives to gain the Mind of Christ, the qualities of the so-called carnal mind and their effects, sin, disease and death lose their suppositional presence and power in his thinknig and in his life.

THE EFFECT OF PRAYER IN CHRISTIAN SCIENCE.

The Christian Scientist recognizing that disease is always the effect of false mortal law and of false thinking destroys disease through spiritual thinking or right thinking about God and about His creation. This spiritual thinking, combined with the desire to know God and to overcome the qualities of the carnal mind in our thoughts and lives, constitutes true prayer, and this prayer reveals to men the Science of the Christ which includes all true Science, theology and medicine. Furthermore, as a man understands this Science of the Christ and strives to live it, so that he may demonstrate it both for himself and for his fellow men, he is obeying Jesus' command as given to Peter, "Feed my sheep" (John xxi., 17), for it is only through the understanding of divine law as revealed in the teachings of Christ Jesus that men are going to be delivered from evil. Humanity does not need to be fed any longer on the husks of material theories, for it has already been overfed on them, but it does need to be fed on the divine facts which Jesus revealed to men and demonstrated for their benefit. These facts lived and practiced in their purity and Science must eventually deliver mankind from all evil.

It is sometimes objected that Christian Scientists are establishing an unnatural antipathy between the flesh or the material, and the spiritual, because they teach the infinite allness and supremacy of Spirit, God, divine Mind, and the temporal nature of materiality. To such objections one need only quote Paul's statement that "the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other:" (Gal. v. 17). Mrs. Eddy, however, although teaching the allness of Spirit, particularly states that Christ is the friend of mortal man (Science and Health, p. 433), and this because Christ saves mortal man from himself by revealing man's true nature as the son of God. The effect of prayer in Christian Science is not to deprive men of anything that is worth having, but to remove materiality and its effects sin, disease and death from their thoughts and experience and to establish in their thoughts true health, holiness and happiness which are eternally based on God, divine Mind, and are attained only through spiritual thinking.

FEAR CAST OUT BY CHRISTIAN SCIENCE.

Christian Science handles all mortal discord with divine law. If the mortal discord be poverty, if it be accident, if it be worry or sorrow, if it be human trouble of any kind, the Christian Scientist recognizes that these things can only afflict the mortal mentality, because the body without a mentality would be unconscious of any of these things. Recognizing that these are all troubles of the carnal mind or of mortal thought, he deals with them through divine thought or the Mind of Christ. The wise Christian Scientist in his prayer, or his treatment, will always deal resolutely and unfailingly with the human belief of fear. As he gains experience in Christian Science healing he will find that fear is an active agent in nearly every human ill, and in most cases if he succeeds in removing and casting out the fear from his patient's mentality he will heal him of his trouble at once. Since God, the only presence and power, is divine Love, fear can have neither presence nor power and the Christian Scientist through understanding the allness of divine Love proves that "perfect love (or God) casteth out fear:" (1 John iv., 18).

Spiritual thinking, that is a right understanding of God and of existence or spiritual idealism, is not only the way of salvation for the individual, but humanity as a whole owes every step it has taken out of materialism to this very process of spiritual thinking. As humanity has turned thought actively and unreservedly, not to the things which are seen, but to the things which are not seen, and which are divinely real, then it truly has prayed, and this prayer has to some extent delivered from mortality and from the effects of mortality, sin, disease, death and limitation of every kind. Since salvation, however, is individual, the important factor is the consecrated thinking of the individual.

TRUE LAW AND GOVERNMENT AS REVEALED BY CHRISTIAN SCIENCE.

All thinking people recognize that we are today living at a time when humanity's sense of divine law has not sufficed to deliver it from war, from bolshevism, from class hatred, and from other dangerous tendencies. The fact is that humanity is still working on the old basis of the Mosaic law, which says an eye for an eye, and men have not yet begun to perceive and to demonstrate the law of Love which Jesus declared and reiterated time and time again to be the only way of freedom from human unrest. Mrs. Eddy has revealed to her followers that just as health and holiness are divine facts which the individual must obtain and retain for himself through spiritual thinking, so also law is a divine attribute which every individual must demonstrate for himself. Thus the community will obtain law and government based, not on human opinions, but on universal obedience to the one divine Mind, God. Mrs. Eddy was so certain of the fact that true government is based wholly on spiritual thinking and not on human arrangements that in her own Church, which she considered to be all-important, since she knew that it was destined to bring the idealism of Jesus to humanity in a clearer and more practical way than ever before, she established a form of government from which she had removed every possible human equation except a Board of Directors of five people. These Directors she did not expect to govern her Church, but they were to transact the business of her Church. The government of her Church she left to the attainment and demonstration of divine government by the individuals comprising that Church. In the same way that she expected her followers to demonstrate the divine fact of ever-present health, just so she laid upon them the onus of demonstrating ever-present divine law. She also laid upon them the restriction of not interfering with the government of that Church in any human way, because she had no faith in human ways and means. In fact, Mrs. Eddy realized so clearly the necessity for demonstrating divine law in her Church and in human affairs, that she devoted one of her books entirely to the subject, and this book is known as the Manual of The Mother Church, the First Church of Christ, Scientist, in Boston, Mass. Mrs. Eddy knew that the by-laws in this Manual were divinely inspired, and that they were therefore unalterable. She writes of this book: "Notwithstanding the sacrilegious moth of time, eternity awaits our Church Manual, which will maintain its rank as in the past, amid ministries aggressive and active, and will stand when those have passed to rest." (The First Church of Christ Scientist & Miscellany, page 230, 1-4). The demonstration of divine law by the individual is the only pure democracy, for in it every man has an equal right to bring into operation true law and power through his unlimited God-given ability to express the divine Mind, God, as the result of his spiritual thinking or of having the Mind of Christ. This demonstration of government through spiritual idealism alone can deliver humanity from war, distrust among nations, greed, hatred, injustice, and other national and class dangers and divisions. The individual who recognizes and lives the divine fact that God is Love is praying aright, and his prayer will remove hate and war from among men, just as surely as light destroys darkness. Until men recognize and live these eternal facts, war, sin, disease, death, unrest and evil of every kind will continue among mortals.

CHRISTIAN SCIENCE, THE IDEALISM OF JESUS.

My friends, we Christian Scientists are declaring no new and strange doctrine to you, we are simply reiterating that the spiritual idealism of Christ Jesus is real and true, that it is scientific in the highest sense, that it is truly theological and infallible in its healing effect. Christian Scientists have, in fact, learned that the only way of deliverance from evil or mortal woe of any kind is spiritual thinking or the divine idealism which Jesus revealed to mankind. You may not at this time be ready or willing to accept or to admit these things, but I want to say to you with all respect, but with absolute assurance, that you and every human being must eventually accept, live, and prove this teaching, for there is no other way to salvation, and there is no other way of attaining heaven or of being freed from mortality. Let me therefore advise you to study the Christian Science textbook, "Science and Health with Key to the Scriptures," by Mary Baker Eddy, and see if it does not make the Bible a new book, a more sacred book to you.

MARY BAKER EDDY.

One earnest, consecrated thinker, a loving, lovable woman, Mary Baker Eddy, has accomplished these things for humanity in her day. It is not possible for me to speak as I would desire of Mrs. Eddy and of all that I owe to her. If there is today anything that is good, that is pure, that is healthy, or that is God-like in my life, I owe it to the consecrated thought and life of Mary Baker Eddy, and millions are telling this same story. It is true that one only begins fully to appreciate Mrs. Eddy and her life-work as he understands and demonstrates Christian Science, although a great multitude of men and women

PETITION

In the Superior Court of the State of California, in and for the County of Los Angeles.

In re. Application by the Glendale Publishing and Printing Company, a Corporation, that Glendale Press as to its Daily Edition Be Declared and Adjudged a Newspaper of General Circulation.

The petitioner, Glendale Publishing and Printing Company, a corporation, hereby petitions that the Glendale Press as to its daily edition be declared and adjudged a newspaper of general circulation and in that behalf alleges:

I.

That the Glendale Publishing and Printing Company is a corporation duly organized and existing under and by virtue of the laws of the State of California and has its principal place of business at the City of Glendale, County of Los Angeles, State of California.

II.

That the Glendale Press was printed and published at regular weekly intervals for more than one year prior to March 1, 1921, in the City of Glendale, County of Los Angeles, State of California, by J. W. Usilton and J. H. Folz, its sole owners and proprietors, that on March 1, 1921, the said petitioner as the successor in interest of the said J. W. Usilton and J. H. Folz of the said Glendale Press and the Glendale Press plant and equipment began to print and publish and ever since has continued to print and publish at regular daily intervals, except Sundays, the said Glendale Press as "Glendale Daily Press, (Daily Edition of the Glendale Press)," at said City of Glendale, County of Los Angeles, State of California that said Glendale Press, daily edition, is a newspaper of general circulation, printed and published as aforesaid, for the dissemination of local and telegraphic news and intelligence of a general character, and has a bonafide subscription list of paying subscribers to whom said newspaper is delivered daily as printed and published and for which each and every subscriber pays the said petitioner at the regular subscription rates.

III.

That said Glendale Press was priated and published as a newspaper by said J. W. Usilton and J. H. Folz continuously and at regular weekly intervals, except Sundays, for more than one year prior to said March 1, 1921, and was on said March 1, 1921, and daily thereafter, except Sundays, to the present time, has been printed and published and continues to be printed and published at regular daily intervals at said City of Glendale, by said petitioner for the dissemination of local and telegraphic news and intelligence of a general character.

IV.

That said Glendale Press, printed and published at regular weekly and regular daily intervals, as aforesaid, had at all of the times mentioned in this petition and now has a bonafide subscription list of paying subscribers at the regular subscription rates.

V.

That said Glendale Press was at all of said times a newspaper of general circulation and published for the purpose and at the place as aforesaid.

VI.

That said Glendale Press has not been during any of the time mentioned in this petition and is not now devoted to the interests or published for the entertainment or instruction of any particular class, profession, trade, calling, race, or denomination, or for any number of such classes, professions, trades, callings, races or denominations nor has the avowed purpose of said newspaper ever been, nor is it now the avowed purpose of said newspaper to entertain or instruct such classes or any of such classes.

WHEREFORE, petitioner prays that this Honorable Court ascertain and adjudge that said Glendale Press is a daily newspaper of general circulation within the meaning and requirements of Section 4460 of the Political Code of the State of California, and as such is entitled to accept contracts for and do official advertising and publishing wherever the same is required by any law of the State of California, and for such other and further relief as may be meet and proper in the premises.

GLENDALE PUBLISHING & PRINTING COMPANY,
By MATTISON B. JONES,
President.

JONES, WILSON & STEPHENSON,
By MATTISON B. JONES,
Attorneys for Petitioner.

State of California, County of Los Angeles, ss.

J. W. Usilton, being first duly sworn, deposes and says: that he is the General Manager of the petitioner, the Glendale Publishing & Printing Company, and Editor of said newspaper that he has read and knows the contents of the foregoing petition, and that the matters set forth in said petition are true and correct.

J. W. USILTON.

Subscribed and sworn to before me this 31st day of March, 1921.

(Seal) DWIGHT L. STEPHENSON,
Notary Public in and for the County of Los Angeles, State of California.

NOTICE

In the Superior Court of the State of California in and for the County of Los Angeles

In re. application by the Glendale Publishing and Printing Company, a Corporation, that Glendale Press as to its Daily Edition be declared and adjudged a newspaper of general circulation.

Notice is hereby given that the petitioner in the foregoing petition intends to apply to the Superior Court of the State of California in and for the County of Los Angeles on Thursday, the 14th day of April, 1921, at 10 o'clock A.M., or as soon thereafter as petitioner may be heard, at the Courthouse of said Superior Court within the City of Los Angeles, County of Los Angeles, State of California, for an order setting the foregoing petition for hearing and for decision and judgment as in said petition prayed.

GLENDALE PUBLISHING & PRINTING COMPANY.
By MATTISON B. JONES,
President.

Dated: April 1, 1921.

TARIFF REVISION IS HOUSE PROBLEM

By A. O. HAYWARD
I. N. S. Staff Correspondent

WASHINGTON, April 11.—A legislative program so huge that it was stunning to the leaders confronted the house of representatives today.

Besides the tax and tariff revision, in themselves tedious and difficult tasks, there were unfinished appropriation bills to be passed, a mass of reconstruction legislation under consideration, and a thousand or more matters of odds and ends waiting to be taken up.

House Overwhelmingly Republican

Standing ready to tackle this great undertaking was a house overwhelmingly Republican, but with one-fifth of its membership new to the legislative grind which is necessary to accomplishment. The old Republican leaders were on hand to steer the course for their followers, and President Harding, the party leader, was in the saddle to insist on teamwork.

Few changes were permitted in the house organization. Speaker Frederick H. Gillett of Massachusetts, began his second term as the presiding officer; Representative Frank W. Mondell of Wyoming, took his place on the floor as Republican leader, and Representative James R. Mann of Illinois, veteran Republican leader and parliamentarian, stood at his back as prompter. They had the assistance of many of the old committee chairmen.

Death and sickness and defeat have stripped the Democratic side of the house of many of its most experienced and valuable members, and rendered more difficult its role of criticizing and combatting the majority.

Former Speaker Champ Clark of Missouri, sagacious, benevolent guide who had led his party to victories in past years, was missing, asleep in his Missouri grave. Representative Claude Kitchen of North Carolina, weakened by long illness, was barred from his former joyous course in rough and tumble debate, although he was present to counsel and guide. The mantle of actual Democratic leadership has fallen on new men, prominent among them being Representative Finis J. Garrett of Tenessee; James F Byrnes of South Carolina, and Edward W. Pou of North Carolina. History will show how well they acquit themselves.

One Vacancy Still Exists

The new house is made up of 301 Republicans, 132 Democrats, 1 Socialist. There is one vacancy, that of a representative-at-large from Pennsylvania, caused by the death of M. H. Garland. With the filling of the vacancy the house will consist of 302 Republicans. There have been filed about a dozen contests for the seats of sitting members, mostly Democrats, and this numerical division of the house may be changed somewhat during the coming months.

Not since the elections of 1912 did the voters of the country make such sweeping changes in the political complexion of the House as was made by the elections of last November. In 1912 the voters returned to the house 290 Democrats, 124 Republicans, 15 Progressives, 5 Progressive Republicans and 1 Independent.

In the present house there is one Socialist, Meyer London of New York, an experienced legislator who has seen previous service in the house. There is one woman, Alice Robertson of Oklahoma, a Republican, the first woman congressman since Jeannette Rankin of Montana, who was defeated for reelection in 1918. There are about 95 members of the house who come in without any previous experience in congress, and these with over 100 others make up the total of 200 members who have seen two years and less of service.

Democrats Experienced

Most of the Democratic members are experienced. They are from the south, just about a half-a-dozen of them coming from the northern states. But even in the south the Democratic ranks were thinned at the last elections, the Republicans having made gain of members from Oklahoma, Texas and Missouri.

The opening session of the house today was scheduled to be routine and perfunctory. After the swearing in of the speaker, the clerk of the house, sergeant-at-arms, doorkeeper and other officials, the members of the house were called and sworn in by states the speaker administering the oath of office. There followed then the naming of committee members by the Republican floor leader and the Democratic leader. By unanimous action named leader and given the Democratic complimentary vote for speaker of the house.

Committees Rearranged

The committee membership was rearranged by the Republican majority of the house, based on the relative numerical representation of the two parties and to give a greater number of committee assignments to the Republican members. The ways and means committee will consist of 17 Republicans and 8 Democrats; the large standing committees of 21 members will consist of 16 Republicans and 5 Democrats; the appropriations committee, of 35, and the rules committee of 9 members have not been apportioned.

With this organization work completed the house planned to adjourn for the day. During the short session there was dropped in to the house hopper by members a flood of bills, many of them being measures that failed of passage in the last congress. New members dragged from their pockets special legislation in which they were interested and which played a more or less conspicuous part in their local campaigns.

The set legislative program for the house is passage of the anti-dumping and American valuation legislation, the emergency farmers tariff bill, the army and navy appropriation bills that failed at the last congress, general tariff revision, revision of the tax laws, special legislation desired by President Harding to give him greater latitude in consolidating and reorganizing the various departments and agencies of the government.

Session May Run Till August

With this legislation out of the way or on its course the legislators will take up budget legislation, of the house based on the last census, cold storage legislation, control of produce exchanges, modification of the Clayton anti-trust law as affecting railroads, coal control, soldier bonus, immigration restriction, infancy and maternity aid, patent office reorganization, and such other legislation as shall from time to time thrust itself forward as immediately necessary.

Republican leaders admit that this is an ambitious program, and they do not hope to get it through at the present session. With what must be done at once the most hopeful see the constant daily grind running far into August, while others speak despondently of an adjournment in November. There is talk already of a recess during the dog days of July and August, but the leaders say there must be no shirking and no abandonment of the work until the legislation needed by the country shall have been enacted.

Christian Science Lecture
By John W. Doorly, C. S. B.

(Continued from page 5)

who are not Christian Scientists have also recognized Mrs. Eddy's great contribution to the salvation of humanity. Mrs. Eddy not only discovered Christian Science, but as the result of years of struggle and toil she founded it on a practical, demonstrable basis. No forward step in this great Movement has ever been taken but as the result of her initiative and advice, and every step initiated by her was the result of deep and consecrated prayer. Christian Scientists regard Mrs. Eddy as God's messenger to this age, and they know that through her revelation many of them have been delivered from sin and disease, and even from death. Think what this world of ours will be like when more of us are enabled and emboldened to put away our material theories and dependencies and to rely wholly on the divine Mind, God, operating in human experience through spiritual thinking or through true prayer. Then will sin and sorrow vanish from men's thoughts, then will pain be stilled and the dread of disease be cast out, then will the lame man leap with joy and the leper be cleansed, then will war cease and the reign of divine Love be established. These very things are indeed being accomplished to some extent today, but the harvest is still great and the laborers few. We Christian Scientists, therefore, long for the time when our fellow men and women shall recognize the all-importance of spiritual things and come to work and to pray in this vineyard with us. Then will be fully established the reign of true Science, the Science of Christ, the true theology, the theology of divine Mind, God, and the true healing, the healing through the understanding of the complete spiritual facts of being. Then will all men gladly recognize that Mary Baker Eddy is indeed God's messenger.

In conclusion, let me draw your attention to the fact that Christian Science is not an easy path for the loose thinker, but is the way for the simple and consecrated as well as for the profound thinker. Such thinkers find peace and joy, health and life in divine facts, or in knowing God and true being, and it is through such thinking that the individual, as well as humanity as a whole, is going to be enabled to understand and prove that:—

"There's a wideness in God's mercy,
Like the wideness of the sea;
There's a kindness in His justice,
Which is more than liberty.

"For the love of God is broader
Than is seen by human mind,
And the heart of the Eternal
Is most wonderfully kind.

"If our love were but more simple,
We should take Him at His word;
And our lives would be all sunshine
In the sweetness of our Lord."

(Christian Science Hymnal, p. 236.)

WHY NOT OWN YOUR OWN HOME?

The average man of family has probably paid out enough money in his time to have built a dozen nice homes, and all he has to show for that expenditure now is a bundle of old rent receipts that wouldn't buy a loaf of bread if his family was starving. There are times in one's life when paying rent is a necessity, but it should be of short duration. Every man that is a real sure enough man ought to have implanted into his very nature the impulse to own his own home, no matter how humble it be, and to take a pride in improving and building it up, planting around it trees and shrubs and flowers, and then sitting under his own fig tree at evening when the day's work is done with that comfortable feeling that he owns a bit of the earth and is lord of his own castle. The man that does not possess that desire is off wrong somehow and has lost half that makes life worth living. Better own a tent or a shack and be free of landlordship than live in a mansion and have to devote one-fourth of your life getting the money for the rent.

H. E. NOBLE BLOCK ON WEST BROADWAY

H. E. Noble is said to be about ready to begin the construction of the building he is to erect at the corner of Orange and Broadway, for which Alfred Priest has prepared plans. Its dimensions will be 75 by 75, divided into three storerooms. It will be of brick construction with golden ruffles and enameled ivory for trim.

VACANT LOTS IN DEMAND

E. G. Warren, who has recently become associated with the Schimmelfeng Realty company of 217 North Brand boulevard, reports that vacant lots are in great demand in Glendale. Mr. Warren has just sold two lots to prospective home builders. Mr. Warren also reports many calls for five and six room bungalows by people who wish to buy before prices advance in Glendale, as they no doubt will by next fall.

J. F. STANFORD BUILDS

J. F. Stanford is building at 125 North Adams street a fine six-room bungalow for A. W. Van Loon. This is a most complete and high-class home with the best of materials going into its construction. The price of this home when completed will be about $5000, not including the lot.

A. J. VAN WIE SELLS LOT

A. J. Van Wie has sold the lot at 320 North Belmont to Mrs. W. A. Anderson, who will build a home there.

HARRY WHITE'S SPANISH HOME

One of the [illegible] residences soon to be built in our city, on which work will probably start next week, is the home of Mr. and Mrs. Harry White, at Jackson and Doran. It is of hollow tile construction and Spanish architecture, designed by Alfred Priest. It will contain nine rooms and a basement with patio and garden walls that will connect with garage. There will be servants' quarters and bath in the garage. The roof will be partially tiled. There will be a patio porch with ornamental grilled iron openings, and the exterior will be of plaster finish. Its cost will be in the neighborhood of $15,000.

CHAIN STORES ARE COMING HERE

With the advent of the Sam Seelig and Piggly-Wiggly grocery stores, Glendale will be well supplied with cut-rate groceries. There are two Chaffee stores and many others handling food stuffs hew to the line in their prices on life-sustaining commodities. In addition, according to a well-known traveling man formerly living in Glendale and who makes regular trips to this city, it is probable another chain store will locate here, but in the southern part of the city.

HANDSOME NEW HARROWER HOME

The handsome home of Dr. and Mrs. Henry R. Harrower, on East Broadway, is nearing completion. It is of hollow tile construction and Italian style, and will contain ten rooms besides two bathrooms, a basement, patio and garage. The cost will be in the neighborhood of $16,000 to $17,000. The scheme of landscape gardening will be consistent with the character of the house, which was designed by Architect Alfred Priest of this city.

OF INTEREST TO HOUSEWIVES

Mildewed leather may be cleaned with vaseline.

Long handles on brooms, brushes and dustpans save the back.

To remove grease spots from silk take a lump of magnesia, rub it wet on spot, let dry, then brush the powder off.

Keep empty spools and slip them over the nails in the hookless closet. They are a great protection to the clothes.

Many a man has the "grippe" who never had the password.

APRIL 14, 15, 16

Mrs. Gable Will Demonstrate

How to Reduce Your Household Expense

The cost of every meal can be greatly reduced with little effort. Cheaper cuts of meat, hard-to-cook foods and soups, that are so nourishing and taste so good, are quickly and easily prepared in a

National ALUMINUM STEAM PRESSURE COOKER and CANNER

Authorities on cooking recommend this method because it retains all the juices and flavors and makes all food more easily digestible. Will not scorch or burn.

The money saved pays for the cooker in a few weeks—from then on the amount saved on food and fuel cuts living expenses greatly. Girls of sixteen are able to prepare a whole meal at one time over a single burner, so simple is the operation.

Let us show you this National Steam Pressure Cooker—the best investment any family can make.

GLEE CLUB OF C. I. ENTERTAINS AUDIENCE

The Glee Club of the California Institute of Technology of Pasadena, entertained a large audience at the First Methodist church on Saturday evening with a program ranging from classical numbers to college glees and popular songs and winding up with their school and class yells.
Musically, socially and financially the affair was voted a great success. The concert was given under the auspices of the Men's Bible class, of which A. G. Lindley is president and was in charge of Rev. Dr. Hoskyn.

Notice of Consideration of Fire Districts

An ordinance fixing the fire districts is now under consideration by the Board of Trustees. A brief description of the districts as proposed and a map outlining the same may be consulted at the Chamber of Commerce office at 105 West Broadway. The matter will be further considered by the Board of Trustees Thursday evening, the 14th instant, at 8:30.
T. W. WATSON,
City Manager.

Notice to Builders and Those Contemplating the Location of Garages

The provisions in regard to the location and establishment of public garages as embodied in Ordinance 372 have been inadvertently overlooked in that attention has not been called to the provisions of this ordinance making it unlawful for any person, firm or corporation to maintain, carry on, establish, enlarge or extend any public garage in the City of Glendale outside of the industrial districts without first procuring from the Board of Trustees of the City of Glendale special permit for that purpose. Notice is hereby given that the provisions of this ordinance will hereafter be enforced.
For further particulars those interested are referred to Ordinance 372 and to the Superintendent of Building
T. W. WATSON,
City Manager.

OBITUARY NOTICES

Mrs. Ruby Frances Alston
Mrs. Ruby Frances Alston, passed away Sunday at the home of her parents, Mr. and Mrs. Oliver E. Wright at 354 Burchette street. Her husband and one child survive her. She was born July 14, 1892, in Anamosa, Ia. Funeral services will be held at the Scovern chapel, Wednesday morning at 10:30 o'clock, conducted by Rev. E. E. Ford, pastor of the Glendale Baptist church.

John Henry Wieman
Sunday morning at 1:45 death claimed a patriarch in John Henry Wieman, who passed away at his home in Tujunga at the ripe age of 9[illegible] years. He was born in Germany, but had been a naturalized American for many years and a sojourner in California for 30 years. For the past five years he has been a resident of Tujunga. Five grandsons survive him. The date and place of funeral services, which will be in charge of Pulliam & Kiefer, have not been set.

Mrs. Maude Salom
Mrs. Maude Salom of 316 West Park avenue, Eagle Rock, formerly of Glendale, died suddenly early Sunday morning after a two days' illness.
Mrs. Salom came to California about six years ago and for about two years made her home in Glendale. She then moved to Eagle Rock where she resided until her death.
She had many friends both in Glendale and Eagle Rock, who will mourn her loss. Her kindly nature and cheerful disposition under all circumstances made brighter the lives of all who knew her, and such a life leaves an imprint that death cannot efface.
Funeral services will be held on Friday, April 15, at 2 p. m., at the Little Church of the Flowers, interment in Forest Lawn cemetery. Funeral will be private, under the auspices of the L. G. Scovern Company.

If you have rice for dinner, try adding bits of candied ginger and you will surprise your family with a new and delicious flavor to a favorite dish.
